01 / EVIDENCE REVIEW

Review the sources before the claim.

SOURCE CARDS

8 invented / 5 included / 3 excluded

INCLUDED ROLES

2 method / 2 example / 1 reflection

This report demonstrates a transparent review using eight invented source cards. Five cards meet the exercise scope; three are excluded. It is a worked template, not a literature review of real publications.

The question is how a discussion prompt might make its intended use clearer. Included material comprises two method notes, two example sheets and one reflection. Their contents illustrate a review process without supplying empirical evidence of effectiveness.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Review question	Record review question and its source boundary.
Intended use	Record intended use and its source boundary.
Main limitation	Record main limitation and its source boundary.

What can this review organise without claiming that a real intervention works?

02 / EVIDENCE REVIEW

Make the search boundary visible.

SOURCE CARDS

8 invented / 5 included / 3 excluded

INCLUDED ROLES

2 method / 2 example / 1 reflection

Describe which material was considered and where the boundary sits. This exercise uses a closed set of eight cards rather than claiming an exhaustive database search.

A real review would record its search locations, terms, dates and access limitations. Here the complete invented set is exported as source JSON and CSV, so readers can inspect every inclusion and exclusion instead of trusting a hidden selection.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Material boundary	Record material boundary and its source boundary.
Search not performed	Record search not performed and its source boundary.
Source artifact	Record source artifact and its source boundary.

What would need to be recorded before this could be described as an actual literature search?

03 / EVIDENCE REVIEW

Keep a source register.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

Assign each card an identifier and preserve its type, scope status and reason for inclusion or exclusion. An identifier is a traceability tool, not a citation to a real author.

S01–S05 are in scope. S06 is an unsupported opinion, S07 a duplicate exercise card and S08 outside the prompt-clarity question. These decisions are stipulated teaching examples, not independent assessments of real scholarship.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Source identifier	Record source identifier and its source boundary.
Type	Record type and its source boundary.
Review note	Record review note and its source boundary.

Can another reader reconstruct the five-card set without inferring a missing publication?

04 / EVIDENCE REVIEW

Apply the inclusion rule consistently.

SOURCE CARDS

8 invented / 5 included / 3 excluded

INCLUDED ROLES

2 method / 2 example / 1 reflection

The inclusion rule accepts a distinct card that addresses the prompt-clarity question and supplies interpretable exercise material. Apply the rule before choosing a preferred conclusion.

Five of eight cards remain. The three exclusions have different reasons, so they should not be grouped as low-quality studies. A duplicate, an irrelevant item and an unsupported opinion represent different limits on use.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Rule	Record rule and its source boundary.
Borderline item	Record borderline item and its source boundary.
Exclusion reason	Record exclusion reason and its source boundary.

Which change to the scope rule would change the reviewed set?

05 / EVIDENCE REVIEW

Group by source role.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

A source role describes what a card can contribute. A method note can explain an approach; an example sheet can show wording; a reflection can raise a question. These roles are not evidence grades.

Within the five included cards, method notes account for two, example sheets for two and reflections for one. The counts reconcile to five but do not measure reliability, effect size or confidence in a real-world claim.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Method notes	Record method notes and its source boundary.
Example sheets	Record example sheets and its source boundary.
Reflections	Record reflections and its source boundary.

Which question would require a source type absent from this set?

06 / EVIDENCE REVIEW

Trace a recurring theme.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

The exercise assigns a clarity theme to S01, S02 and S04. Report the source identifiers alongside the theme so the reader can inspect the grouping.

Three cards mentioning clarity do not constitute three independent empirical replications. They are invented materials with different roles. The useful result is a visible path from the theme label back to each card, not a vote count for effectiveness.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

Theme	Record theme and its source boundary.
Supporting cards	Record supporting cards and its source boundary.
Interpretation boundary	Record interpretation boundary and its source boundary.

What wording would prevent the three-card theme from being mistaken for proven effectiveness?

07 / EVIDENCE REVIEW

Preserve differences in emphasis.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

S03 and S05 are grouped under context. Their emphasis differs from the clarity group and should remain visible rather than being forced into a single recommendation.

The two context cards can prompt questions about intended use and missing setting information. The exercise does not establish a contradiction between findings because no real study results exist. A reviewer should distinguish different emphases from conflicting empirical results.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Context cards	Record context cards and its source boundary.
Different emphasis	Record different emphasis and its source boundary.
Open question	Record open question and its source boundary.

Which distinction would be lost by collapsing all five cards into one conclusion?

08 / EVIDENCE REVIEW

Explain quality limits in use.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

Assess a source against the claim for which it is being used. A source can be suitable as an illustration while unsuitable as evidence about prevalence or learning outcomes.

All eight cards are invented. The five included cards help demonstrate registration, grouping and traceability only. They cannot establish demand, user preference, causal effects or the quality of a real programme, regardless of how polished the report appears.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Proposed claim	Record proposed claim and its source boundary.
Suitable use	Record suitable use and its source boundary.
Unsupported use	Record unsupported use and its source boundary.

Which attractive conclusion reaches furthest beyond this source set?

09 / EVIDENCE REVIEW

Write a bounded synthesis.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

Bring the source roles and themes together without turning descriptive grouping into a recommendation backed by research. Keep the reviewed set and its limitations in the summary.

A bounded synthesis says that the five exercise cards illustrate two areas to examine: wording clarity and contextual fit. It does not say that either improvement has been demonstrated to cause a beneficial outcome. Real recommendations need their own relevant evidence.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

Synthesis sentence	Record synthesis sentence and its source boundary.
Traceable support	Record traceable support and its source boundary.
Qualification	Record qualification and its source boundary.

Can every substantive phrase in the synthesis be traced to the invented register?

10 / EVIDENCE REVIEW

Leave an auditable next question.

SOURCE CARDS	INCLUDED ROLES
8 invented / 5 included / 3 excluded	2 method / 2 example / 1 reflection

Close with the question that remains and the kind of real source that would be needed. Preserve the source export and inclusion decisions with the report.

The next inquiry could seek appropriate empirical material about interpretation of prompts in a defined context. This template has performed no search, study or quality appraisal of actual publications. Its complete result is a reproducible worked review structure.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

Next question	Record next question and its source boundary.
Needed source	Record needed source and its source boundary.
Handoff artifact	Record handoff artifact and its source boundary.

What evidence would change this from a review exercise into a real evidence review?
