01 / LANDSCAPE SCAN

Scan a fictional option space.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

This report compares six invented prompt-management concepts across four binary feature dimensions. The exercise is a comparison model, not a market survey, competitor benchmark or description of real products.

North, Bridge, Grove, Beacon, Harbor and Thread are placeholders. Fifteen of the 24 feature flags are true. A feature count can describe the model but cannot establish quality, value, usability or a winning product.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Scan question

Record scan question and its source boundary.

Option boundary

Record option boundary and its source boundary.

Ranking not supplied

Record ranking not supplied and its source boundary.

What decision could this comparison help frame without pretending to be real market research?

02 / LANDSCAPE SCAN

Declare the scan boundary.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

A landscape is shaped by what it includes and excludes. Here the closed set contains six authored concepts, with no external product search or verification.

A real scan would need source locations, observation dates, inclusion logic and a plan to revisit changing information. The exported six-row source makes this small fictional boundary inspectable rather than suggesting exhaustive market coverage.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Included concepts

Record included concepts and its source boundary.

Search not performed

Record search not performed and its source boundary.

External source needed

Record external source needed and its source boundary.

What would need to change before the report could claim actual landscape coverage?

03 / LANDSCAPE SCAN

Choose consistent dimensions.

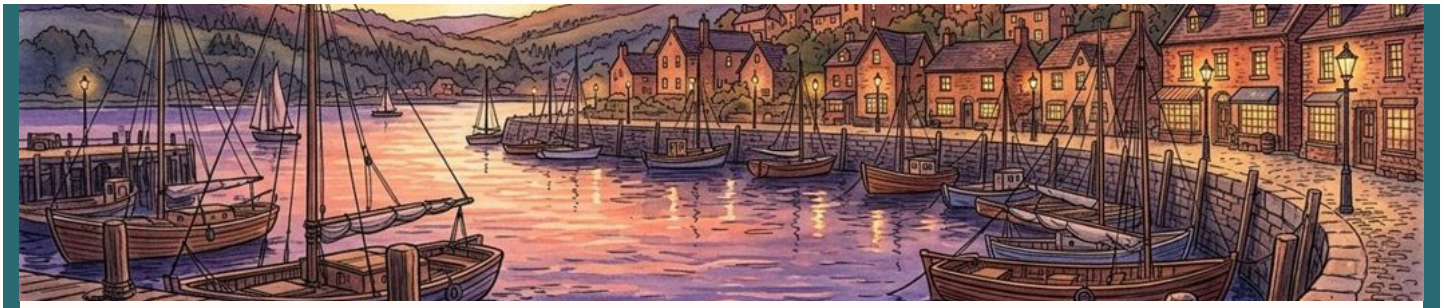

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

The four dimensions are visible version labels, a shared index, an offline copy and a review note. A binary flag means only that the capability is stipulated in the fictional row.

True does not mean tested, well implemented or appropriate for a particular user. False means absent in this model, not a verified weakness of a real product. Keep definition questions separate from capability counts.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Dimension	Meaning of true	Meaning of false
Record dimension and its source boundary.	Record meaning of true and its source boundary.	Record meaning of false and its source boundary.

Which dimension would require a more precise definition before comparing actual products?

04 / LANDSCAPE SCAN

Keep the option index inspectable.

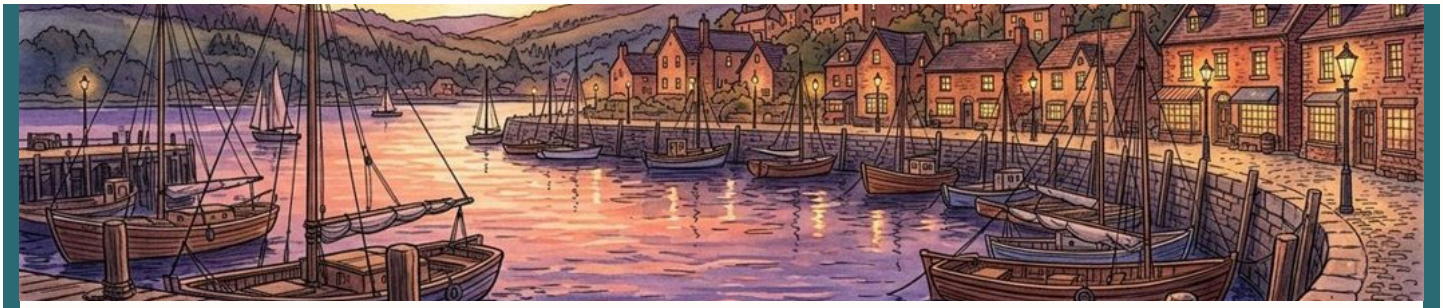

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

Each concept has an identifier and all four flags in the source. Do not hide inconvenient attributes behind a single summary score.

North has version and index flags; Bridge has version, offline and review; Grove has index and offline. Beacon has version, index and review; Harbor has offline and review; Thread has version, index and offline. These are invented configurations.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Option identifier

Record option identifier and its source boundary.

Stipulated features

Record stipulated features and its source boundary.

Source trace

Record source trace and its source boundary.

Can a reader reconstruct every concept without relying on an unqualified score?

05 / LANDSCAPE SCAN

Read the capability matrix.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

Version, index and offline flags each appear in four of the six rows. Review-note flags appear in three. The column counts sum to 15 true flags across 24 cells.

That total does not mean that 62.5% of an actual market supports these features. It is a property of six authored examples. Keep the denominator and fictional source label beside any summary of the matrix.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Column totals

Record column totals and its source boundary.

Total flags

Record total flags and its source boundary.

Denominator boundary

Record denominator boundary and its source boundary.

Which phrasing would incorrectly turn a model count into a market statistic?

06 / LANDSCAPE SCAN

Map a pair of dimensions.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

A two-dimension map is a projection, not the full landscape. Use version visibility and offline copy to show how different configurations can occupy the same region.

Bridge and Thread both have version and offline flags. North and Beacon have version without offline; Grove and Harbor have offline without version. No concept occupies neither cell in this particular model. The omitted dimensions still matter.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Map axes

Record map axes and its source boundary.

Overlapping options

Record overlapping options and its source boundary.

Omitted dimensions

Record omitted dimensions and its source boundary.

What important difference is hidden when two concepts share one map cell?

07 / LANDSCAPE SCAN

Treat a signal as a hypothesis.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

A pattern in the comparison can suggest a question to investigate, but it is not a verified trend. This source has no time series, adoption data or external observations.

The combination of offline access and review notes could prompt a design discussion. It cannot be called emerging demand, a growth segment or an underserved market on the basis of these six invented configurations.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Pattern noticed

Record pattern noticed and its source boundary.

Hypothesis

Record hypothesis and its source boundary.

Evidence not supplied

Record evidence not supplied and its source boundary.

Which independent source would be needed before calling the pattern a real trend?

08 / LANDSCAPE SCAN

Mark information gaps honestly.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

A binary feature matrix leaves out usability, maintenance, cost, rights and context. Unknown information should stay unknown rather than being filled with assumed ratings.

The model supplies no prices, quality tests, product maturity or actual service commitments.

A richer real comparison would need relevant sources for each dimension and could reveal that the initial four-feature framing is insufficient.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Missing dimension	Needed source	Effect on comparison
Record missing dimension and its source boundary.	Record needed source and its source boundary.	Record effect on comparison and its source boundary.

Which missing dimension could reverse a choice based only on feature presence?

09 / LANDSCAPE SCAN

Frame an opportunity without claiming demand.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

An apparent empty combination can be a prompt for exploration, not evidence of a valuable opportunity. A concept still needs a coherent purpose and appropriate validation.

The model has no row with all four flags, but adding every capability is not automatically a useful design. Context, maintenance and user intent could make a narrower option preferable. No market size or commercial result is supplied.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Potential combination

Record potential combination and its source boundary.

Intended purpose

Record intended purpose and its source boundary.

Validation question

Record validation question and its source boundary.

What would show that filling a matrix gap is useful rather than merely possible?

10 / LANDSCAPE SCAN

Leave a monitoring plan.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

COMPARISON MODEL

6 invented options × 4 flags

FEATURE TOTALS

15 true flags / 24 cells; not market share

Close with the sources and comparison rules a real scan would need to maintain. Distinguish a proposed monitoring activity from a task accepted by an actual owner.

A future scan could record verified product versions, source dates and unresolved feature definitions. The present report remains a six-concept teaching matrix. Preserve the complete source and the fictional labels when sharing a modified version.

Analyst record / trace the source

Separate the supplied synthetic result from your interpretation and any real-world evidence still needed.

Future source

Record future source and its source boundary.

Revisit rule

Record revisit rule and its source boundary.

Role to confirm

Record role to confirm and its source boundary.

What should a later reviewer check before reusing this comparison?
