01 / PROJECT STUDIO

Define a learning challenge.

Challenge

Write your challenge here.

audience assumption

Write your audience assumption here.

learning goal

Write your learning goal here.

Write the challenge in one sentence and name the skill you want to practise.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

This studio course uses a fictional tabletop display project to practise planning, critique and iteration. The result is a learning artifact, not an approved product or installation.

Challenge: communicate three ideas using a small paper model. The audience and setting are invented so learners can focus on how choices connect to an intention.

Challenge / audience assumption / learning goal

Working record: Write the challenge in one sentence and name the skill you want to practise. Keep your first attempt and your revised version so the change remains visible.

02 / PROJECT STUDIO

Agree a learning contract.

Practice commitment

Write your practice commitment here.

feedback request

Write your feedback request here.

boundary

Write your boundary here.

Write three commitments that you can actually observe in your own process.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

A learning contract describes how the exercise will be approached and what kind of feedback will help. It does not assign real employment duties or grant formal certification.

A learner might commit to keeping two alternatives, recording one reason for each choice and asking for feedback about clarity rather than taste.

Practice commitment / feedback request / boundary

Working record: Write three commitments that you can actually observe in your own process. Keep your first attempt and your revised version so the change remains visible.

03 / PROJECT STUDIO

Split the challenge into questions.

Message question

Write your message question here.

form question

Write your form question here.

evaluation question

Write your evaluation question here.

Turn one broad challenge into three answerable design questions.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Break the broad task into questions about message, form and interpretation. Keep tasks distinct from questions so activity does not become a substitute for learning.

Make three cards: What should a viewer notice first? Which arrangement supports that intention? What would show that the message remains unclear?

Message question / form question / evaluation question

Working record: Turn one broad challenge into three answerable design questions. Keep your first attempt and your revised version so the change remains visible.

04 / PROJECT STUDIO

Map the resources you have.

Available	reference	missing	needs review
Write your available here.	Write your reference here.	Write your missing here.	Write your needs review here.

Build a resource map without presenting invented supplies as a real allocation.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Separate supplied materials, borrowed references and missing information. This exercise provides illustrations and a document structure, not a real workshop inventory.

A fictional resource list might contain paper, a pencil and an example image. A real making session would need its own material suitability and appropriate setting checks.

Available / reference / missing / needs review

Working record: Build a resource map without presenting invented supplies as a real allocation. Keep your first attempt and your revised version so the change remains visible.

05 / PROJECT STUDIO

Make the work visible.

Proposed	trying	discuss	unresolved
Write your proposed here.	Write your trying here.	Write your discuss here.	Write your unresolved here.

Place three learning tasks on the board and explain one status choice.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

Use a small task board to distinguish proposed work, work being tried and work ready for discussion. A status is a local learning record, not an official project approval.

Move draft three labels from proposed to trying only after you begin the draft. Keep an unresolved question attached to work that is ready for feedback.

Proposed / trying / discuss / unresolved

Working record: Place three learning tasks on the board and explain one status choice. Keep your first attempt and your revised version so the change remains visible.

06 / PROJECT STUDIO

Keep a process log.

Attempt	reason	observed issue	next move
Write your attempt here.	Write your reason here.	Write your observed issue here.	Write your next move here.

Write two dated-by-version entries rather than inventing a real project calendar.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

Record a choice while its context is still available. A process log is more informative when it includes a rejected option and the reason for the rejection.

Entry: tried a circular arrangement to suggest equal importance; rejected it because the starting point became hard to find. This is a design judgement, not a measured user result.

Attempt / reason / observed issue / next move

Working record: Write two dated-by-version entries rather than inventing a real project calendar. Keep your first attempt and your revised version so the change remains visible.

07 / PROJECT STUDIO

Ask for a focused critique.

Intention	artifact	question	feedback note
Write your intention here.	Write your artifact here.	Write your question here.	Write your feedback note here.

Draft a critique request that a peer could answer specifically.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Present the intention, one artifact and one question. Focused critique makes it easier to distinguish a preference from a concern about the stated goal.

Instead of Do you like it? ask Which label did you notice first, and what in the arrangement drew your attention? Use invented peer responses for this document exercise.

Intention / artifact / question / feedback note

Working record: Draft a critique request that a peer could answer specifically. Keep your first attempt and your revised version so the change remains visible.

08 / PROJECT STUDIO

Compare an iteration.

Version A	version B	reason	trade-off
Write your version a here.	Write your version b here.	Write your reason here.	Write your trade-off here.

Document one change and one unresolved consequence.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Show what changed, why it changed and which question remains open. A later version is not automatically better; it may exchange one strength for another.

Moving the first label upward may clarify the starting point while reducing symmetry. Record that trade-off rather than claiming the revision solved everything.

Version A / version B / reason / trade-off

Working record: Document one change and one unresolved consequence. Keep your first attempt and your revised version so the change remains visible.

09 / PROJECT STUDIO

Explain the artifact.

Challenge	approach	supporting artifact	limit
Write your challenge here.	Write your approach here.	Write your supporting artifact here.	Write your limit here.

Write an outcome statement that another learner can inspect against the artifact.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

A short outcome statement connects the challenge, the selected approach and the limits of the result. Do not claim real audience validation when the course used invented examples.

The statement can describe the intended reading order and point to the layout that supports it. It should also say that no real audience study was supplied.

Challenge / approach / supporting artifact / limit

Working record: Write an outcome statement that another learner can inspect against the artifact. Keep your first attempt and your revised version so the change remains visible.

10 / PROJECT STUDIO

Plan the next learning cycle.

Lesson	next question	proposed exercise	evidence need
Write your lesson here.	Write your next question here.	Write your proposed exercise here.	Write your evidence need here.

Choose one next cycle and explain why it follows from this one.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

Close by choosing a question that arose from the work rather than adding every possible improvement to an endless list. A focused next cycle is easier to evaluate.

If the starting point remains unclear, the next exercise might compare two label arrangements using a consistent observation prompt. That is a proposed learning task, not a scheduled real study.

Lesson / next question / proposed exercise / evidence need

Working record: Choose one next cycle and explain why it follows from this one. Keep your first attempt and your revised version so the change remains visible.
