01 / RESEARCH COMMISSION

Commission a question, not a conclusion.

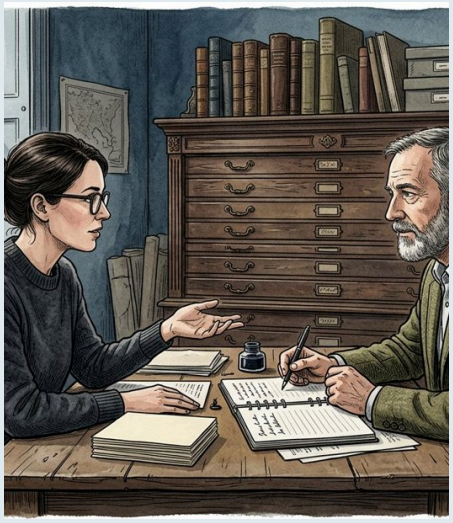

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Commission question	Draft commission question: not yet confirmed.
Decision sought	Draft decision sought: not yet confirmed.
Intended use	Draft intended use: not yet confirmed.

What decision could the proposed inquiry inform without promising a particular result?

This proposal scopes a fictional inquiry into how readers interpret a discussion prompt. The requested decision is whether the research question and proposed approach are suitable for further review.

The proposal does not promise that the prompt works. It defines the uncertainty, possible sources, intended analysis and limits so a prospective commissioner can challenge the approach before any real study is considered.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

02 / RESEARCH COMMISSION

Describe the knowledge gap.

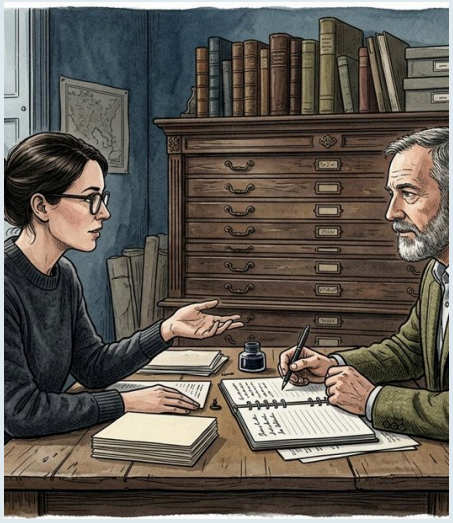

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Known material	Draft known material: not yet confirmed.
Knowledge gap	Draft knowledge gap: not yet confirmed.
Source still needed	Draft source still needed: not yet confirmed.

Which missing source would most affect the proposed research scope?

A useful background section explains what is unknown and why it matters to the intended decision. Distinguish available context from a claim that a full literature review has been completed.

In this example, the wording of a prompt is available but its interpretation in a real setting is unknown. The proposal includes no literature search or empirical source, so those gaps must remain explicit.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

03 / RESEARCH COMMISSION

Arrange the research questions.

Main question	Draft main question: not yet confirmed.
Supporting question	Draft supporting question: not yet confirmed.
Decision link	Draft decision link: not yet confirmed.

Which supporting question can be removed without weakening the main inquiry?

Separate the main question from supporting questions about language, context and possible misunderstanding. Each question should have a clear relationship to the proposed decision.

Main question: what interpretations might the prompt invite? Supporting questions could examine ambiguous terms and missing context. These are questions to investigate, not findings about what any participant actually thinks.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

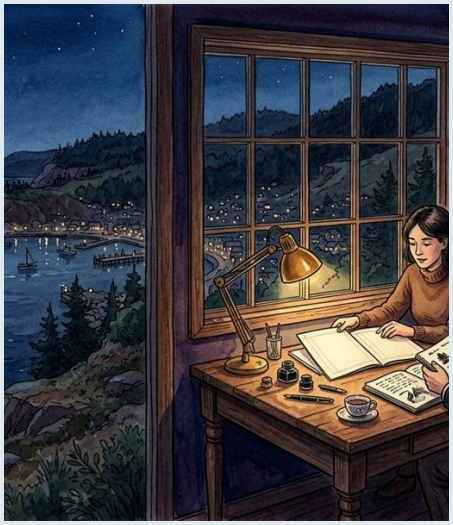

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

04 / RESEARCH COMMISSION

Choose a method for the question.

Question	Draft question: not yet confirmed.
Candidate method	Draft candidate method: not yet confirmed.
Method limitation	Draft method limitation: not yet confirmed.

What would the candidate method be unable to tell the commissioner?

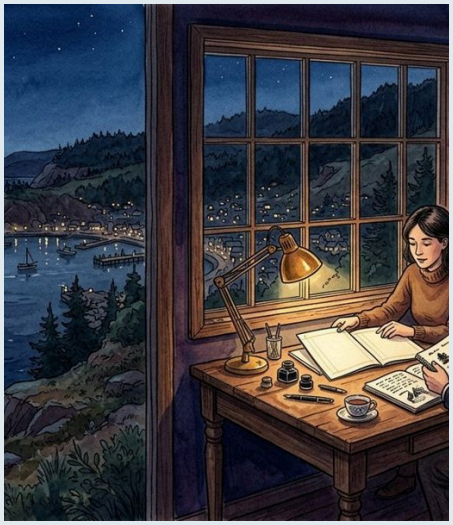

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Match the kind of uncertainty to the kind of material a method could produce. A method label alone does not establish suitability or permission to carry it out.

A desk review could inspect wording; an appropriately reviewed interview study could explore interpretation in context. The first would not supply participant views, while the second would require real arrangements not provided by this document.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

05 / RESEARCH COMMISSION

Define the material boundary.

Included material	Draft included material: not yet confirmed.
Excluded material	Draft excluded material: not yet confirmed.
Access question	Draft access question: not yet confirmed.

What material boundary should remain attached to every research artifact?

State which documents or proposed sources are within scope and which are excluded. Keep source availability separate from the right to access, retain or reuse material.

The fictional desk scope could include the draft prompt and version notes. It excludes personal records and actual interview data. Any real research involving people or their information would need appropriate consent, review and safeguards outside this template.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

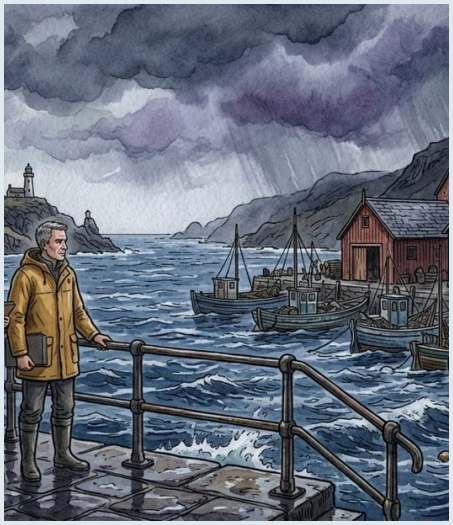

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

06 / RESEARCH COMMISSION

Explain the analysis plan.

Analysis unit	Draft analysis unit: not yet confirmed.
Proposed category	Draft proposed category: not yet confirmed.
Interpretation boundary	Draft interpretation boundary: not yet confirmed.

How would a reviewer trace an interpretation back to the material that prompted it?

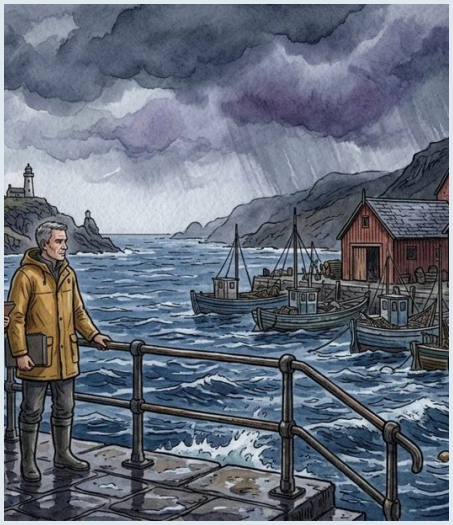

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

Describe how material would be organised before deciding what it means. A transparent analysis plan makes it easier to notice when an interpretation outruns the source.

For a desk review, passages could be grouped by ambiguous term, missing instruction and implied assumption. The categories are proposed analytic tools, not validated codes or a summary of real collected data.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

07 / RESEARCH COMMISSION

Expose the limitations early.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Limitation	Draft limitation: not yet confirmed.
Consequence	Draft consequence: not yet confirmed.
Possible follow-up	Draft possible follow-up: not yet confirmed.

Which desired conclusion would be unjustified even if the proposed analysis were completed?

List limitations in terms of their effect on the decision, not as a generic disclaimer added after a conclusion. A narrow study can still be useful if its boundary is understood.

A wording review could identify candidate ambiguities but could not establish prevalence, preference or learning outcomes. A later study would need its own suitable design if the commissioner requires a different kind of answer.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

08 / RESEARCH COMMISSION

Identify resources and dependencies.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Dependency	Draft dependency: not yet confirmed.
Confirmation needed	Draft confirmation needed: not yet confirmed.
Effect on scope	Draft effect on scope: not yet confirmed.

Which dependency could require changing the research question or method?

State what would need to be available before the work could be responsibly commissioned. Resource categories should include review and context, not only analyst time.

The proposal leaves actual staffing, fee, schedule, permissions and source access unconfirmed. A real commission would need those conditions to be agreed independently rather than inferred from a complete-looking methods page.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

09 / RESEARCH COMMISSION

Define a useful delivery.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

Deliverable	Draft deliverable: not yet confirmed.
Review criterion	Draft review criterion: not yet confirmed.
Required source trace	Draft required source trace: not yet confirmed.

What should the receiving reviewer be able to inspect rather than merely trust?

Describe the deliverable and the quality questions a commissioner could use to review it. A useful research handoff preserves the distinction between source material, interpretation and recommendation.

A proposed desk-review package might contain a question map, annotated prompt and limitations note. It should not be described as an empirical report or validated recommendation. No actual study output is supplied by this proposal.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

10 / RESEARCH COMMISSION

Request a scope decision.

Scope response	Draft scope response: not yet confirmed.
Open condition	Draft open condition: not yet confirmed.
Authorised role to confirm	Draft authorised role to confirm: not yet confirmed.

What must be resolved before this becomes a real research commission?

Offer a bounded choice: refine the question, review the proposed method or defer the commission. A positive response to the proposal is not approval to recruit participants or collect data.

Record the question accepted for further discussion, the conditions still open and the role authorised to make a real commissioning decision. Appropriate contracts and review processes remain outside this fictional template.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.
