01 / SERVICE BLUEPRINT

Connect the visible service to its support.

Visitor intention	Draft visitor intention: not yet confirmed.
Visible response	Draft visible response: not yet confirmed.
Supporting activity	Draft supporting activity: not yet confirmed.

Which service question should the blueprint make easier to discuss?

This proposal explores an imagined library welcome interaction. The blueprint links a visitor action, a visible response and the behind-the-scenes support that might make that response possible.

The decision is whether this service concept deserves contextual research and responsible review. The illustrated desk is a visual reference only; it supplies no site dimensions, staffing capacity or evidence about real visitors.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

02 / SERVICE BLUEPRINT

Begin with a situation, not a persona claim.

Situation	Draft situation: not yet confirmed.
Visitor question	Draft visitor question: not yet confirmed.
Unknown context	Draft unknown context: not yet confirmed.

What contextual information would change how the welcome interaction is designed?

Describe the task a fictional visitor is trying to accomplish and the information they may lack. Avoid presenting a made-up profile as research about an actual population.

Example situation: a first-time reader wants to understand where a group discussion might happen. Their familiarity, access needs and preferences remain unknown. A real service proposal would investigate those conditions through appropriate methods.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

03 / SERVICE BLUEPRINT

Map the frontstage contact.

Visible touchpoint	Draft visible touchpoint: not yet confirmed.
Intended clarification	Draft intended clarification: not yet confirmed.
Review question	Draft review question: not yet confirmed.

What should the visitor understand after this touchpoint, and what remains unconfirmed?

Frontstage actions are the visible words, objects and responses a visitor encounters. State what the interaction is intended to clarify rather than promising that it works.

A proposed welcome card might explain the purpose of a session and where to ask a question. It should not imply guaranteed availability, accessibility or eligibility. The wording needs review against the real service context before use.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

04 / SERVICE BLUEPRINT

Reveal the backstage work.

Backstage preparation	Draft backstage preparation: not yet confirmed.
Update responsibility	Draft update responsibility: not yet confirmed.
Dependency	Draft dependency: not yet confirmed.

Which backstage task must exist before the proposed frontstage response is credible?

A simple visible response can depend on preparation that visitors do not see. Put those backstage activities on the same page so the proposal does not hide its implementation burden.

A welcome card could require a current session description, an agreed point of contact and a way to update the copy. These are proposed activities; no role or organisation has accepted them through this document.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

05 / SERVICE BLUEPRINT

Identify the supporting systems.

Information source	Draft information source: not yet confirmed.
Coordination mechanism	Draft coordination mechanism: not yet confirmed.
Unresolved interface	Draft unresolved interface: not yet confirmed.

Where would the service obtain a reliable answer when information changes?

Distinguish a service idea from the information and coordination systems it would need. The blueprint should make gaps visible rather than imply that a real technical integration already exists.

A current information source, a version record and a route for questions might support the welcome interaction. Do not invent a booking system, identity check or confirmed database connection to make the diagram appear complete.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

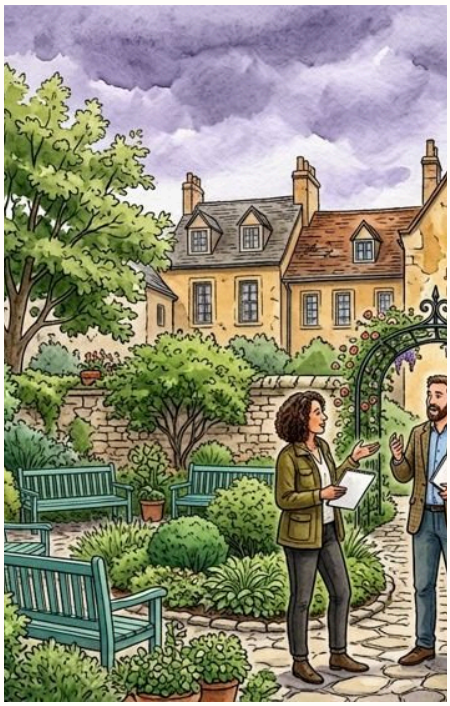

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

06 / SERVICE BLUEPRINT

Mark the points of uncertainty.

Potential breakpoint	Draft potential breakpoint: not yet confirmed.
Underlying dependency	Draft underlying dependency: not yet confirmed.
Clarification needed	Draft clarification needed: not yet confirmed.

Which breakpoint could not be fixed by rewriting the visible message alone?

A breakpoint is a place where the proposed flow could fail to answer the visitor’s question or depend on missing support. Name the uncertainty before selecting a solution.

For example, an outdated card could direct a visitor to a session that is not confirmed. The issue might concern information ownership rather than the visual design of the card. These are hypothetical failure modes, not observed incidents.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

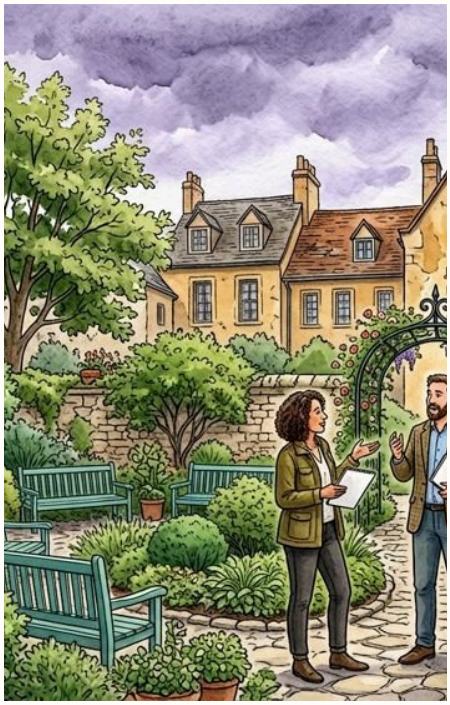

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

07 / SERVICE BLUEPRINT

Compare a lighter alternative.

Option A	Draft option a: not yet confirmed.
Option B	Draft option b: not yet confirmed.
Dependency trade-off	Draft dependency trade-off: not yet confirmed.

What evidence would make the lighter option preferable?

Test the concept against an option with fewer dependencies. An alternative is useful when it pursues the same visitor intention rather than simply offering a different-looking desk.

Compare a maintained welcome card with a clearly identified route for asking a question. The latter may reduce copy maintenance but depend more on an available contact. Neither option is confirmed as suitable for a real service.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

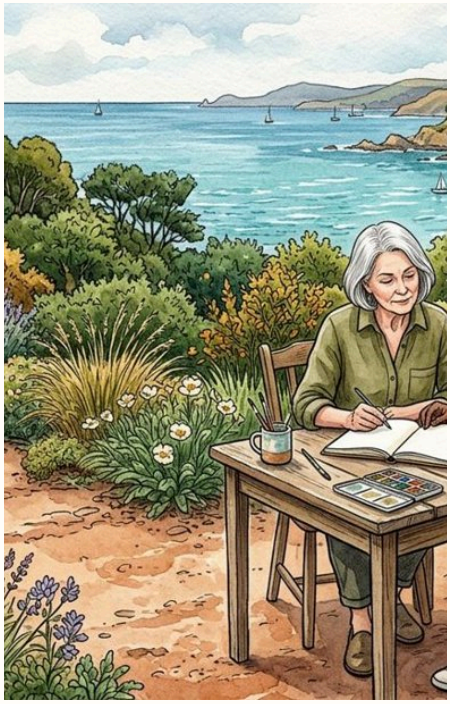

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

08 / SERVICE BLUEPRINT

Turn assumptions into research questions.

Assumption	Draft assumption: not yet confirmed.
Research question	Draft research question: not yet confirmed.
Appropriate source to seek	Draft appropriate source to seek: not yet confirmed.

Which question should be investigated before the service concept is developed further?

Translate the most important uncertainties into questions a suitable inquiry could address. Keep proposed research separate from actual findings.

Questions might concern what first-time readers need to know, who maintains information and how changes reach the visible touchpoint. An illustration cannot answer any of these questions, and this template contains no participant study.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

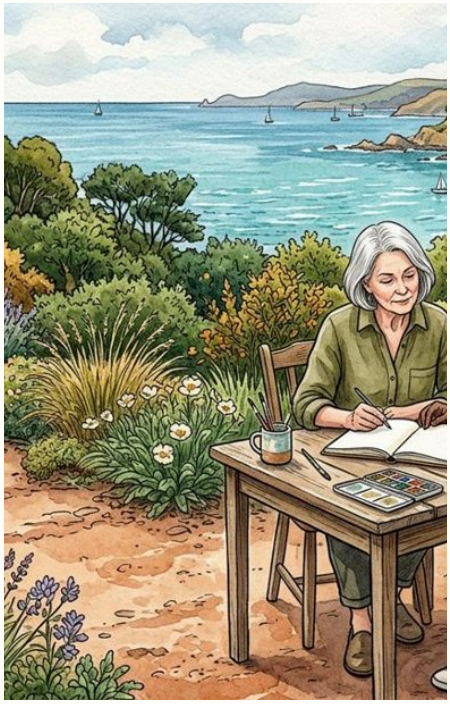

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

09 / SERVICE BLUEPRINT

Define the service handoff.

Handoff artifact	Draft handoff artifact: not yet confirmed.
Receiving role to confirm	Draft receiving role to confirm: not yet confirmed.
Acceptance condition	Draft acceptance condition: not yet confirmed.

What confirmation would distinguish a useful handoff from an unsupported assignment?

A handoff should identify the current concept version, the unresolved dependencies and the role that would need to accept further work. Passing a file is not the same as transferring responsibility.

The proposed package includes a blueprint, copy draft and question list. A real owner would need to confirm which artifacts are useful and which operating conditions apply. Do not label a concept reviewed or approved without that confirmation.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

10 / SERVICE BLUEPRINT

Record the concept decision.

Decision option	Draft decision option: not yet confirmed.
Dependency to resolve	Draft dependency to resolve: not yet confirmed.
Next version change	Draft next version change: not yet confirmed.

What needs to change in the blueprint before another review would be useful?

Invite a reader to keep, revise or pause the service concept, with a reason tied to its dependencies. A decision record should preserve the uncertainty rather than make the diagram look final.

A bounded response might request contextual research before choosing between the card and contact-route options. Keep the distinction between a concept discussion and an operating service visible in every exported copy.

Working proposal record

Record a draft response in each labelled field. Keep unknowns visible and distinguish a proposal from an accepted commitment.
