01 / LEAN VENTURE

State the venture as a question.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Archive Desk is a fictional service concept for keeping a source, a saved passage and its intended use connected. The planning question is whether a defined reader task warrants a separate offering.

Treat the canvas as a collection of linked hypotheses, not a completed business case. A coherent explanation can still be wrong about the problem, the buyer or the work required to deliver it.

Business intent / not a launch claim

The next useful artifact is a bounded description of the task and the evidence that would change the team’s mind. No operating venture is established by this document.

ASSUMPTION / EVIDENCE / REVISION

Intent

Explore whether source-context work warrants an offering.

Boundary

No actual venture, release or customer demand established.

Next artifact

A task description with explicit disconfirming questions.

What must be true before this concept deserves more resources?

CANVAS REGISTER

H01 / customer / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

02 / LEAN VENTURE

Define a customer hypothesis without inventing a customer.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

The proposed customer is an organisation preparing source-based explanations. The person doing the work may differ from the person who could approve a purchase.

Separate user, buyer and authorising role. These are planning lenses, not researched segments or named organisations. A task that matters to a user does not automatically establish budget or a willingness to pay.

Hypothesis H01 / customer

Ask who experiences the task, who chooses an approach and who would need to review a commercial arrangement. Retain unknowns rather than filling the canvas with fictional endorsements.

ASSUMPTION / EVIDENCE / REVISION

User hypothesis

A person preparing source-based explanatory material.

Buyer hypothesis

An organisation considering a defined support offering.

Evidence gap

No buyer interview, budget or purchase authority supplied.

Which role would need to see value before an actual purchase could be considered?

CANVAS REGISTER

H02 / problem / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

03 / LEAN VENTURE

Describe the problem narrowly.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

A passage can be easy to locate but difficult to interpret when its original question or source context is missing. That is the proposed problem, not a measured pattern of customer failure.

A suitable inquiry would examine how people currently recover context and when that effort matters. Do not assume that a recurring inconvenience is costly enough to support a business or that a new service is the best response.

Hypothesis H02 / problem

Check the existing practice before defining a solution. A clearer annotation or a conversation may be sufficient in some settings.

ASSUMPTION / EVIDENCE / REVISION

Problem premise	Alternative	Validation question
The reason for saving a passage can become unclear.	An improved existing note or handoff may be enough.	When does the missing context materially affect the task?

What observation would challenge the idea that a separate offering is needed?

CANVAS REGISTER

H03 / value / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

04 / LEAN VENTURE

Write a value proposition with a mechanism.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

The proposed offering helps organise a passage, its source and the question it is intended to support. Its intended value is inspectable context, not guaranteed accuracy or productivity.

Explain what the service would actually provide before claiming a benefit. The concept does not establish working software, specialist verification, integration or the right to reuse another person’s source material.

Hypothesis H03 / value

Proposed statement: bring the source and the reason for a passage into one reviewable note. Verify any real delivery capability before adapting the wording.

ASSUMPTION / EVIDENCE / REVISION

Offering

A reviewable note connecting passage, source and purpose.

Intended value

Make the context available for an appropriate reviewer.

Capability gap

No implemented service or verified outcome supplied.

Can the proposed mechanism be demonstrated without promising an unsupported outcome?

CANVAS REGISTER

H04 / channel / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

05 / LEAN VENTURE

Treat the channel as a testable route.

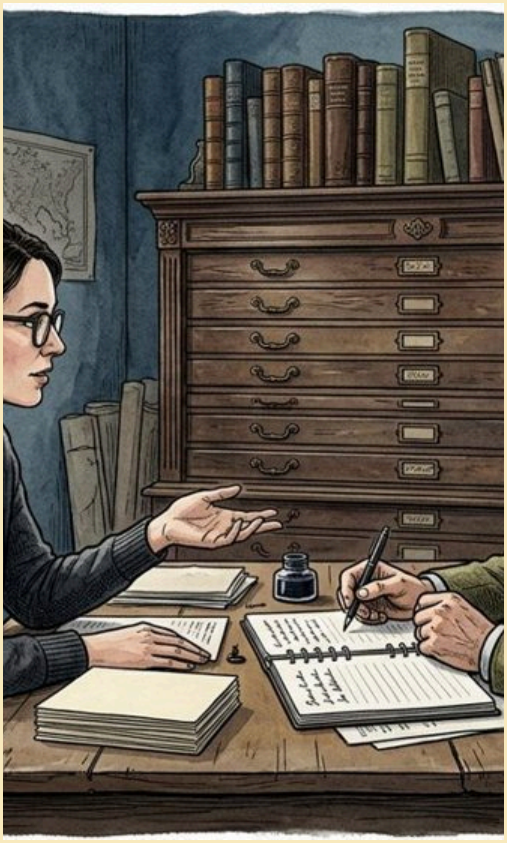

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

An outline shared through an appropriate professional introduction is one possible route to a concept conversation. A short explanatory page is another. Neither is an established acquisition channel.

Define the question each route should answer. A channel test should distinguish permission to contact someone, delivery of a message, understanding of the offering and a genuine commercial discussion.

Hypothesis H04 / channel

No contact list, live destination, campaign result or acquisition cost is supplied. The source register records an untested channel hypothesis only.

ASSUMPTION / EVIDENCE / REVISION

Proposed route	Observation sought	Unknown
An appropriate introduction to the concept outline.	Whether the intended reader understands the offering.	No reach, response, conversion or acquisition-cost data.

What would show that this route reaches an appropriate decision context?

CANVAS REGISTER

H05 / revenue / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

06 / LEAN VENTURE

Separate revenue logic from revenue evidence.

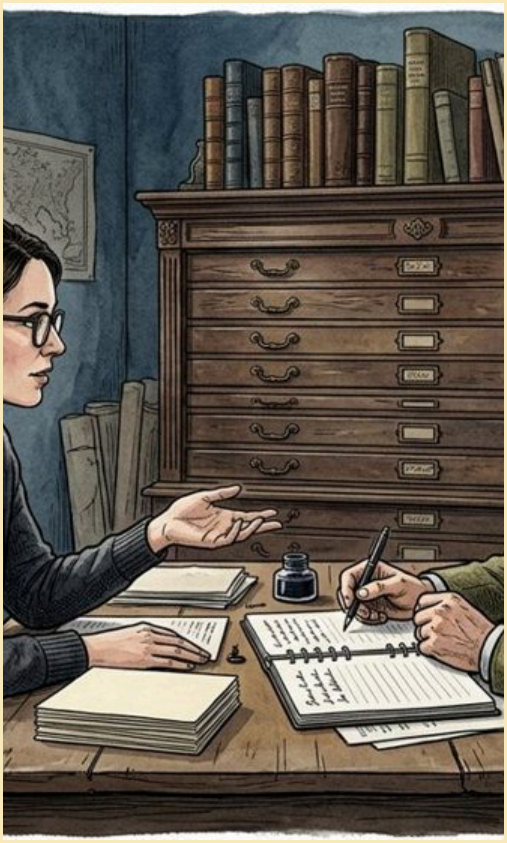

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

One possible commercial model is payment for a defined review-support engagement. The scope, buyer, price and conditions would need real agreement before any revenue claim.

The canvas contains no sales, subscriptions, contracts or cash receipts. Do not convert an interesting conversation into a customer, a proposed price into willingness to pay or an invoice idea into actual revenue.

Hypothesis H05 / revenue

Investigate what work would be purchased and how an appropriate buyer would assess it. Unknown commercial information stays unknown.

ASSUMPTION / EVIDENCE / REVISION

Revenue hypothesis	Terms to establish	Evidence boundary
Payment for a clearly scoped support engagement.	Scope, price, buyer responsibility and conditions.	No agreement, sale or revenue supplied.

What would constitute reviewable evidence of a real commercial commitment?

CANVAS REGISTER

H06 / cost / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

07 / LEAN VENTURE

Expose the work behind the offering.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Delivery may require preparation, source-context handling, reviewer time and coordination. Each is a cost question even when no money has changed hands.

Map the work before guessing a margin. This example supplies no pay rates, software costs, tax assumptions or operating budget. A plausible price cannot establish viability without the relevant delivery and commercial information.

Hypothesis H06 / cost

Ask which resources are fixed for a planning window and which vary with an engagement. Keep effort estimates separate from actual spending and staffing commitments.

ASSUMPTION / EVIDENCE / REVISION

Work required	Cost gap	Constraint question
Preparation, source handling, review and coordination.	No rates, actual spending or validated effort estimates.	Which role or input limits a suitable engagement?

Which resource could constrain delivery even if interest were present?

CANVAS REGISTER

H01 / customer / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

08 / LEAN VENTURE

Prioritise what could invalidate the canvas.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

The validation backlog should start with the assumptions that would make other planning work irrelevant. If the proposed task is not important enough, optimising a channel may be premature.

The six-item register marks customer, problem, value, channel, revenue and cost as untested. No interview, experiment or result has been completed in this example. Rank a learning question by its consequence, not its ease of presentation.

Validation backlog

Start with whether an appropriate person recognises the task and whether a credible existing alternative already meets it. Define suitable evidence before collecting it.

ASSUMPTION / EVIDENCE / REVISION

First question	Second question	Backlog boundary
Does the task warrant a separate offering?	Can the proposed mechanism address a meaningful gap?	Six untested hypotheses, no validated demand.

Which uncertainty should be resolved before the next layer of planning?

CANVAS REGISTER

H02 / problem / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

09 / LEAN VENTURE

Set a revision rule before seeking confirmation.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

A planning rule might be: revise the offering if an appropriate review cannot distinguish its proposed value from a simpler existing practice. That rule is a proposal, not a statistical decision threshold.

Specify what evidence would be relevant, what remains inconclusive and who can interpret it within the actual setting. Avoid collecting only favourable anecdotes or treating absence of a response as proof of absence of need.

Decision condition

No sample, time window or quantitative pass rate is supplied. Agree those details appropriately before using a real evaluation to make a consequential decision.

ASSUMPTION / EVIDENCE / REVISION

Revise condition	Inconclusive condition	Decision boundary
The separate offering adds no clear task value.	Evidence does not address the defined task.	No measured threshold or approved business decision.

What finding would make you stop, narrow or substantially change the concept?

CANVAS REGISTER

H03 / value / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.

10 / LEAN VENTURE

Revise the canvas and preserve the reason.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

A useful revision records which hypothesis changed, the evidence considered and the consequences for the rest of the canvas. Do not silently rewrite the original premise to fit a preferred conclusion.

The current document remains an authored planning example. Six hypotheses are untested, and no real business outcome is reported. Use a new version to make future reasoning inspectable rather than to manufacture a story of inevitable progress.

Next planning cycle

Keep the previous hypothesis beside its replacement. A more polished canvas does not automatically represent a better supported venture.

ASSUMPTION / EVIDENCE / REVISION

Version record

Keep the prior premise and the reason for change.

Linked effects

Revisit buyer, delivery and commercial assumptions together.

Outcome boundary

No validated venture, forecast or funding commitment.

Which linked assumption must be reconsidered when this one changes?

CANVAS REGISTER

H04 / channel / untested

EVIDENCE BOUNDARY

6 hypotheses; no validated demand, customers or revenue.
