01 / PROCESS REHEARSAL

Practise the handoff, not a production target.

MODEL STEP

1 / writer / prepare

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

This rehearsal follows a draft from writer to coordinator to reviewer. Its purpose is to make the input, next question and unresolved condition visible at each handoff.

The model has four steps and three functional roles. It records no actual turnaround, error rate or operational outcome. Use invented material and check any real responsibilities before adapting the exercise.

Process purpose

A useful rehearsal can reveal a missing interface without demonstrating that the process is ready for live use. Keep proposed changes separate from authorised procedures.

LANE / HANDOFF / EXCEPTION

Input	Practice focus	Boundary
A draft and the source relevant to its claim.	Visible questions and explicit receiving conditions.	No live process authority or improvement result supplied.

What must remain understandable when work moves to another role?

02 / PROCESS REHEARSAL

Assign functions without inventing staff.

MODEL STEP

2 / coordinator / check

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

The writer identifies the intended claim. The coordinator checks whether the handoff contains enough context. The reviewer inspects the claim within an agreed scope.

The roles are conceptual, not actual appointments or a management hierarchy. Participants can rotate by agreement during rehearsal. A role card does not give someone authority to approve a real document.

Swimlane roles

Keep the task of the lane distinct from the person practising it. Record uncertainty about responsibility rather than silently giving an unassigned task to the next person.

LANE / HANDOFF / EXCEPTION

Writer lane

Explain intended meaning and provide a source reference.

Coordinator lane

Identify missing context and the next question.

Reviewer lane

Inspect within the actual agreed review responsibility.

Which responsibility must be clarified before a real handoff?

03 / PROCESS REHEARSAL

Check the input before moving it.

MODEL STEP

3 / reviewer / inspect

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

The writer provides a sample passage, its source reference and the question for review. The coordinator identifies any missing element before passing the draft onward.

Input checking is not verification that the claim is true. The exercise separates completeness of a handoff from specialist judgement about the content. A complete packet can still contain an unsupported interpretation.

Input inspection

Use the invented review-effort claim and its explicitly missing source. Record the gap; do not invent a source merely to keep the rehearsal moving.

LANE / HANDOFF / EXCEPTION

Passage	Source status	Review question
A benefit claim in a clearly identified draft.	Missing in the sample; keep that condition visible.	What evidence and definition support the claim?

Is the next role receiving an inspectable task or an unexplained bundle?

04 / PROCESS REHEARSAL

Trace the four proposed steps.

MODEL STEP

4 / writer / return

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Prepare the sample in the writer lane. Check its context in the coordinator lane. Inspect the source question in the reviewer lane. Return unresolved questions to the writer.

These four steps form an illustrative loop, not a measured workflow or an approved release path. The final return is intentional: review can produce another question rather than a completed approval.

Lane sequence

The source register records prepare, check, inspect and return. Each has a proposed input and output, with status not rehearsed.

LANE / HANDOFF / EXCEPTION

Prepare and check

Writer supplies context; coordinator flags gaps.

Inspect

Reviewer examines the stated source question.

Return

Unresolved meaning goes back to the writer.

Where does the model require a response rather than a silent transfer?

05 / PROCESS REHEARSAL

Define the receiving condition.

MODEL STEP

1 / writer / prepare

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

At a handoff, name the artifact version, the question for the receiving role and the condition that remains unresolved. Ask whether the recipient can identify the requested action.

A receipt confirms that material was received, not that its claims were approved. In a real setting, agree the meaning of each status before treating a handoff record as evidence of review.

Interface record

Example: draft version A, source for the review-effort claim missing, clarification requested. No actual recipient or response deadline is supplied.

LANE / HANDOFF / EXCEPTION

Version	Question	Receipt boundary
Identify the specific sample draft.	Ask for the missing source and outcome definition.	Received does not mean verified or approved.

What might the recipient mistakenly assume has already been checked?

06 / PROCESS REHEARSAL

Use an exception card for a missing condition.

MODEL STEP

2 / coordinator / check

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

An exception card preserves what cannot proceed under the current assumptions. For this rehearsal, the exception is a claim whose source cannot be identified.

Describe the condition, the affected handoff and the information needed for reconsideration. Do not convert the card into a blame statement or a real incident record. The model supplies no operational escalation authority.

Exception / effect / next information

Keep the normal lane sequence available while the unresolved condition is discussed. A rehearsal pause does not establish a universal rule for real work.

LANE / HANDOFF / EXCEPTION

Exception	Affected interface	Needed information
The sample claim has no traceable source.	Coordinator cannot explain what supports the claim.	Appropriate source, definition and actual review responsibility.

What information would let an appropriate person reconsider the handoff?

07 / PROCESS REHEARSAL

Record what happens during the exercise.

MODEL STEP

3 / reviewer / inspect

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

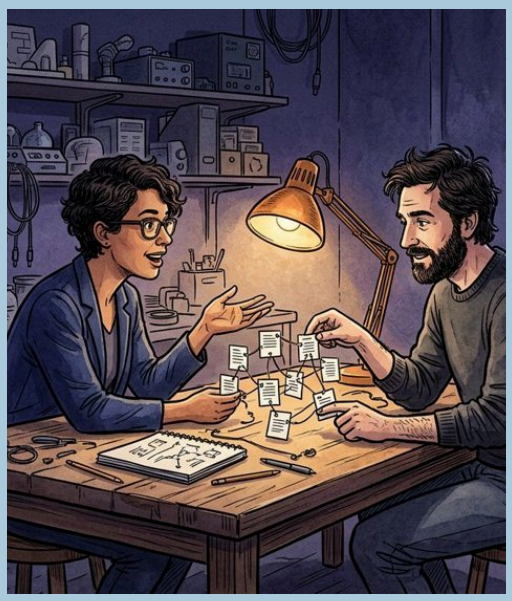

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Use separate notes for the intended step, the visible action and the unresolved question. If participants add a hypothetical condition, mark when the scenario changed.

This template contains no completed rehearsal or actual observation. A facilitator should agree what can be recorded and avoid unnecessary personal information. Describe the task interaction rather than rating participants.

Rehearsal log

Example prompt: did the receiving role understand what was being asked? The answer belongs to an actual agreed exercise, not to the fictional model.

LANE / HANDOFF / EXCEPTION

Planned step	Observed action	Open question
The handoff described in the source register.	Not supplied; record only what actually occurs.	Could the receiving role identify its next task?

Which observation would help improve the interface?

08 / PROCESS REHEARSAL

Discuss a gap without assigning blame.

MODEL STEP

4 / writer / return

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

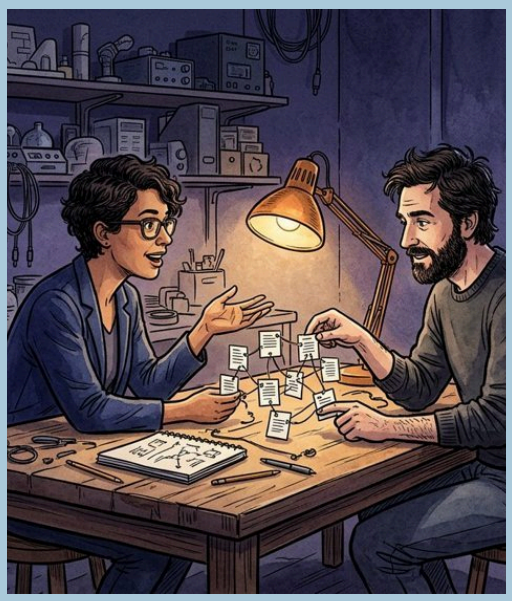

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

If a source question disappears between lanes, inspect how the handoff was described and what the receiving person could see. Do not assume carelessness or a personal failure.

Different explanations may fit the same visible gap: unclear status language, missing context or an unagreed responsibility. Discuss alternatives and identify what evidence would distinguish them.

Gap discussion

The exercise does not establish a root cause, error rate or actual incident. A plausible explanation remains a hypothesis until appropriately supported.

LANE / HANDOFF / EXCEPTION

Visible gap	Possible explanation	Evidence need
The next role cannot find the source question.	Status or responsibility was not clear.	Inspect the actual handoff wording and agreed task.

Which alternative explanation deserves checking before a change is proposed?

09 / PROCESS REHEARSAL

Propose a revision with a reason.

MODEL STEP

1 / writer / prepare

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

A useful revision might add a source-status field or a clearer receiving question. Explain which observed gap it addresses and what new burden it could introduce.

No observation is supplied here, so the example revision remains a proposal. Do not report it as implemented or effective. A real change needs appropriate agreement, review and attention to the actual setting.

Revision proposal

Preserve the previous version so reviewers can understand what changed. A more detailed form is not automatically a better handoff.

LANE / HANDOFF / EXCEPTION

Proposal	Reason to test	Limit
Add a visible unresolved-source field to the handoff.	The receiving role should recognise the open question.	No implemented change or measured effect supplied.

What would show that the revision helps rather than adds noise?

10 / PROCESS REHEARSAL

Rehearse again before generalising.

MODEL STEP

2 / coordinator / check

WORKFLOW BOUNDARY

4 proposed steps, 3 roles; not an authorised procedure.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

Choose one proposed change and repeat the same invented task. Compare whether the next role can identify the question more clearly, using appropriately agreed observations.

A second rehearsal is not proof of production readiness. Keep the task conditions, source version and unresolved responsibilities visible when considering transfer to a real process.

Repeat-run checklist

The source register still has no actual rehearsal outcomes. Use the comparison to identify the next question, not to claim that the workflow has been optimised.

LANE / HANDOFF / EXCEPTION

Keep comparable

Use the same sample and stated task condition.

Inspect

Whether the receiving question is understandable.

Transfer limit

Actual authorisation and process suitability need review.

What remains uncertain after the second attempt?
