01 / ROLE ONBOARDING

Understand the role before the checklist.

The documentation coordinator helps a team keep a draft, its source and its next review question connected. This learning passport introduces that task without granting authority to approve or publish.

Begin by distinguishing coordination from subject-matter judgement. A coordinator can identify a missing source and request clarification; the person responsible for the claim must still confirm its meaning and evidence.

Gate G01 / role boundary

Practice outcome: explain what the role handles, what it refers and where responsibility remains unconfirmed. No actual job description or named appointment is supplied.

GATE / TASK / REVIEW

Role task	Referral boundary	First evidence
Keep draft, source and open question connected.	Do not approve claims outside an agreed remit.	A short explanation of the role boundary.

Which decision must remain with an authorised reviewer?

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G01 / role-boundary

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

02 / ROLE ONBOARDING

Map the people around the task.

A writer explains the intended meaning. A source owner can clarify the origin of material. A reviewer checks the claim within an agreed responsibility. The coordinator makes the handoff visible.

These are functional roles, not named staff or a real reporting hierarchy. One person may hold several roles, but the relevant responsibility should still be explicit before a draft is released.

Collaboration map

Draw the route for a source question: coordinator to writer, writer to the appropriate source owner, then back to the reviewer with a clear record.

GATE / TASK / REVIEW

Writer	Source owner	Reviewer
Clarifies intended meaning and requested change.	Explains the relevant source and its permitted use.	Checks the claim within an agreed remit.

Where would a question become stuck if responsibility were unnamed?

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G02 / task-language

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

03 / ROLE ONBOARDING

Use a shared working vocabulary.

A draft is material still under review. A source is the attributable material supporting an assertion. A handoff records what another person needs to inspect next.

A gate is a learning review point, not an automatic pass. Ready means ready for a specified next review, not approved for every use. Check local terminology before adapting this example to actual work.

Gate G02 / interpret the task

Explain each term using the same sample passage. A definition is useful when the learner can recognise its effect on the next action.

GATE / TASK / REVIEW

Draft	Ready for review	Gate
Material whose meaning or evidence may still change.	A bounded status, not publication approval.	A learning check with evidence still to discuss.

Which word could be misread as permission to publish?

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G03 / handoff

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

04 / ROLE ONBOARDING

Observe the task without inventing performance.

Watch how a sample passage is checked against its source. Notice which question is asked, which artifact is used and how uncertainty is carried forward.

This document contains no actual observation or staff evaluation. In a real exercise, agree what may be observed, avoid unnecessary personal information and let the learner distinguish description from interpretation.

Observation prompt

Use three notes: what was visible, what you inferred and what needs clarification. Do not convert a confident explanation into evidence that the underlying claim is correct.

GATE / TASK / REVIEW

Visible action	Interpretation to check	Question
The reviewer places a source beside a passage.	The connection appears relevant but is not yet verified.	What condition limits reuse of the source?

What did you actually see, rather than assume?

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G04 / feedback-revision

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

05 / ROLE ONBOARDING

Follow one handoff from start to finish.

The coordinator receives a draft with an unexplained quotation. The useful next move is to identify the passage, ask for its origin and record who needs the answer.

Follow the sample through request, clarification and review. Do not silently fill an evidence gap with a plausible source. A complete-looking record can be more misleading than an explicit unresolved question.

Gate G03 / shadow a handoff

Practice with invented material only. If adapting a real example, remove unnecessary personal information and confirm whether the material may be shared for training.

GATE / TASK / REVIEW

Request	Clarification	Handoff
Identify the quotation and ask for its source.	Record the answer without changing its meaning.	Name the next review question and intended recipient.

Can another person tell exactly what remains unresolved?

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G05 / help-route

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

06 / ROLE ONBOARDING

Rehearse the bounded task.

Prepare a sample review note for this passage: The new format helps everyone work faster. No evidence for that statement is supplied.

Rewrite the note to make the gap inspectable. Ask what outcome is meant, whose task is involved and what source would support the assertion. Do not replace the claim with a different unsupported promise.

Simulation, not a real approval

Expected artifact: a passage reference, a clear evidence question and an unresolved status. The practice does not establish that the learner is competent in a real organisation.

GATE / TASK / REVIEW

Passage reference	Evidence question	Status
The unqualified everyone works faster claim.	Which outcome, task and source support this assertion?	Unresolved; no publication approval supplied.

What would make the review note useful to its recipient?

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G01 / role-boundary

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

07 / ROLE ONBOARDING

Use feedback as a gate conversation.

Review the sample note against clarity, source traceability and the visibility of unresolved conditions. Discuss the artifact, not an assumed personality trait or level of confidence.

Ask the learner to explain the choice and revise one part. A gate can end with another practice task. It should not be recorded as passed simply because the worksheet has been completed.

Gate G04 / revise with feedback

The source register lists five proposed gates, all not assessed. There are no ratings, actual observations or certificates in this passport.

GATE / TASK / REVIEW

Clarity check	Traceability check	Revision
The recipient can locate the relevant passage.	The source or missing source is explicit.	Change one ambiguous part and explain the reason.

Which specific change would make the next handoff clearer?

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G02 / task-language

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

08 / ROLE ONBOARDING

Answer common questions without expanding authority.

What if the source is missing? Keep the gap visible and request it. What if two versions differ? Identify the version being reviewed before comparing their claims.

What if someone asks for immediate release? Refer to the actual responsible person and agreed process. This practice guide supplies neither release authority nor an operational escalation deadline.

Useful answers with limits

A coordinator can organise a question without deciding its specialist answer. Separate a missing piece of information from a disagreement about meaning.

GATE / TASK / REVIEW

Missing source	Version conflict	Release request
Record the gap; do not invent a substitute.	Identify the version and relevant difference.	Refer to the actual authority; none is appointed here.

When should the coordinator stop and ask for help?

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G03 / handoff

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

09 / ROLE ONBOARDING

Make the help route usable.

A useful request tells another person what you are reviewing, what is unclear and what kind of response would help. Send only the material needed for that purpose.

Agree the appropriate route in the real setting. No named mentor, response time, contact service or escalation authority is supplied by this template. Do not promise help arrangements that have not been made.

Gate G05 / ask a bounded question

Example: I can locate the quotation but not its source. Who can confirm its origin and any reuse condition before the next review?

GATE / TASK / REVIEW

Context	Question	Help boundary
Identify the draft and passage under review.	Ask who can confirm origin and reuse conditions.	Actual recipient and response arrangement need agreement.

Does this request make the uncertainty easy to act on?

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G04 / feedback-revision

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.

10 / ROLE ONBOARDING

Look back at evidence, not completion ticks.

At the end of this introduction, collect the role explanation, a sample handoff and one revision made after feedback. Use them to discuss what to practise next.

The passport does not calculate readiness or certify competence. A real organisation must define any relevant requirements and appropriate assessment. Keep the learner's self-reflection distinct from an authorised decision.

Next learning cycle

Choose one task that still needs support and agree how a suitable reviewer could inspect a later attempt. Retain the limits of this fictional training example.

GATE / TASK / REVIEW

Evidence gathered	Open learning need	Next review
Role explanation, handoff note and revised question.	A task still requiring clarification or support.	Agree an appropriate artifact and reviewer, not a certificate.

What artifact would show a more useful next attempt?

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

LEARNING GATE

G05 / help-route

EVIDENCE STATUS

5 proposed gates; none assessed. No readiness decision.
