01 / CAMPAIGN PLAYBOOK

State the campaign’s purpose plainly.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Purpose**	Explain a proposed shared creative-workshop experience.
→ **Reader action**	Review the outline before considering an enquiry.
→ **Operational boundary**	No actual event, booking or availability supplied.

What must a reader understand before taking the next step?

Open Table Studio is a fictional creative-workshop concept. The campaign purpose is to help an interested person understand the proposed experience before deciding whether to ask a question.

No actual event, registration service or public programme is established. Plan the communication around informed choice rather than urgency, scarcity or an unsupported promise of personal transformation.

Purpose and audience action

The proposed primary action is to read the workshop outline. A real campaign must verify the outline, destination and operational information before publishing.

JOURNEY BOUNDARY

6 planned touchpoints; sequence is not measured behaviour.

02 / CAMPAIGN PLAYBOOK

Treat the journey as a hypothesis.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→	**Discover**	Encounter a concise description of the idea.
→	**Consider**	Inspect the proposed experience and relevant limits.
→	**Ask**	Seek information that the outline does not resolve.

Where might a real reader enter, skip or leave this sequence?

A person may discover the idea, inspect the outline and ask a practical question. Another may begin with a recommendation or leave without taking any next step.

The six-touchpoint plan is a conceptual sequence, not a funnel observed in analytics. Do not assume every person follows the same path or that one contact caused a later decision.

A map, not measured behaviour

Use the journey to identify information needs. Revisit it after appropriate observation rather than presenting the planning sequence as a conversion model.

03 / CAMPAIGN PLAYBOOK

Give each touchpoint one job.

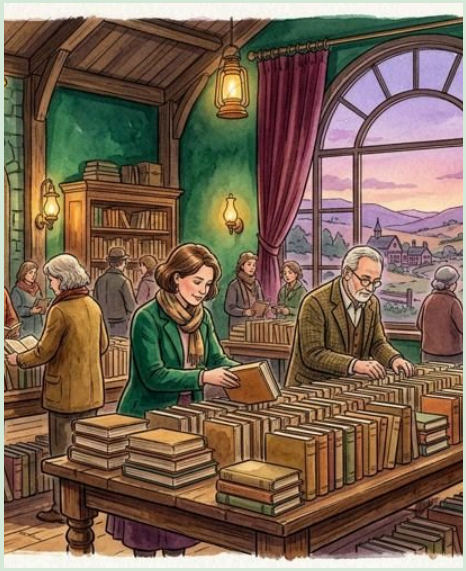

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Awareness assets**	Poster and social post introduce the concept.
→ **Explanation assets**	Outline and email clarify the proposed experience.
→ **Conversation assets**	Enquiry reply and follow-up address open questions.

What question does this touchpoint answer that the previous one did not?

A poster introduces the idea. A social post points to the outline. The outline explains the concept. An email, enquiry reply and follow-up answer progressively more specific questions.

All six touchpoints remain planned. Their order numbers express the model only; no dates, delivery, audience exposure or actual contacts are recorded.

Touchpoints with an information role

Avoid repeating the same promotional sentence at every stage. Keep the core meaning stable while adding the detail appropriate to the reader’s question.

04 / CAMPAIGN PLAYBOOK

Let the message develop honestly.

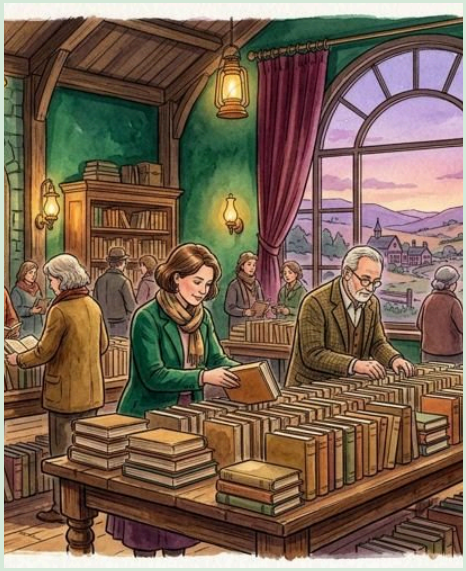

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Opening message**	Explore a proposed shared creative-workshop format.
→ **Explanation**	Read the outline and the questions still unresolved.
→ **Later conversation**	Check actual arrangements before any commitment.

Does the next message add useful detail rather than pressure?

First say what the concept is. Then explain what a participant might do. Finally clarify the conditions that would matter before any real commitment.

The message should gain specificity without gaining unsupported certainty. A journey map cannot justify changing proposed to available or may to will merely because a reader moves to a later touchpoint.

Information progression

Keep the concept status visible throughout the sequence. No later-stage copy should imply a real booking, confirmed timetable or promised outcome.

05 / CAMPAIGN PLAYBOOK

Build assets around the reader’s task.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→	**Introduction**	A short concept description with an honest action.
→	**Outline**	Proposed experience, limits and unresolved arrangements.
→	**Response guide**	Specific questions and verified operational answers.

Which asset is necessary for a useful next step?

The campaign needs a concise introduction, an accessible concept outline and a practical response guide. Each asset should support a distinct information need.

The illustrations in this template are fictional scenes, not photographs of a real programme or participants. Confirm actual image permissions, source rights and accessible alternatives when adapting the assets.

An asset is more than a format

Keep a source and qualification with any claim repeated across assets. A visually polished poster does not make an unsupported statement safer to distribute.

5 / enquiry-reply / ask

JOURNEY BOUNDARY

6 planned touchpoints; sequence is not measured behaviour.

06 / CAMPAIGN PLAYBOOK

Coordinate channels without inventing a schedule.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Shared reference**	One current outline with visible version status.
→ **Channel owner**	Not assigned; confirm responsibility before release.
→ **Correction route**	Update the source and every affected adaptation.

Who would be responsible for keeping each adaptation accurate?

Use one source of truth for the concept description and operational status. Channel adaptations should link back to the same current explanation.

No publication times or assigned people are supplied. A real coordination plan needs responsibilities, review gates, destination checks and a correction method before distribution begins.

Relative sequence, not release dates

The touchpoint register contains six distinct roles, all planned. Neither the order numbers nor channel names establish actual delivery or permission to contact anyone.

TOUCHPOINT REGISTER

JOURNEY BOUNDARY

6 planned touchpoints; sequence is not measured behaviour.

07 / CAMPAIGN PLAYBOOK

Write replies that respect the question.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Availability reply**	No actual event or booking is established here.
→ **Practical enquiry**	Price, access and requirements need real confirmation.
→ **Response boundary**	No contact service or reply-time promise supplied.

Does the reply answer the question without inventing an arrangement?

If asked whether the workshop is available, say that this is a concept example and no actual booking information is supplied. Do not substitute enthusiasm for an answer.

If asked about accessibility, price or requirements, identify the missing information and the appropriate person or source that would need to confirm it. Do not promise a reply time without a real service arrangement.

A bounded response script

Thank the reader for the specific question, state what is known and distinguish what remains unconfirmed. Collect no personal information without an appropriate purpose and permission.

JOURNEY BOUNDARY

6 planned touchpoints; sequence is not measured behaviour.

08 / CAMPAIGN PLAYBOOK

Define a measure before collecting it.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Planning count**	6 touchpoints, all planned, none delivered.
→ **Missing outcome**	No observed audience or response data supplied.
→ **Attribution boundary**	Sequence does not establish causation or conversion.

Which observation would tell us whether the explanation was useful?

A real campaign review might examine delivered messages, visits to the outline or practical questions received. Each has a different denominator and interpretation.

The six planned touchpoints are not six interactions. No reach, clicks, enquiries or conversions are supplied. Establish a legitimate collection purpose, relevant definitions and appropriate privacy safeguards before measuring.

Do not turn the map into a funnel report

A later enquiry does not by itself establish which touchpoint caused it. Keep attribution assumptions separate from observed counts.

JOURNEY BOUNDARY

6 planned touchpoints; sequence is not measured behaviour.

09 / CAMPAIGN PLAYBOOK

Check the points where trust can break.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Truth check**	Concept status remains visible at every touchpoint.
→ **Access check**	The actual explanation and action are accessible.
→ **Rights check**	Distribution and participant permissions are verified.

Which unresolved issue should stop this campaign from being shared?

A misleading availability claim, inaccessible explanation or unverified image can undermine the campaign before any response is measured. Review the whole path, not only the first asset.

Scarcity language and social proof need an actual basis. The template supplies no limited places, endorsements, partner approvals or participant results. Do not add them as decorative persuasion.

Release checks with stop conditions

Pause if an essential destination does not work, if the operational status is unclear or if the relevant permission is missing. A checklist is not a certification.

10 / CAMPAIGN PLAYBOOK

Close the loop with a useful question.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

TOUCHPOINT / HANDOFF / CHECK

→ **Observe**	Record actual delivery and appropriately collected questions.
→ **Interpret**	Separate information gaps from assumptions about demand.
→ **Revise**	Improve the source outline and affected touchpoints.

What should change before the next real communication?

After an actual campaign, ask which explanation helped people make an informed decision and which practical question kept returning. Keep the review tied to the original purpose.

This example contains no delivered activity or results. Its final page is a review method, not a success report. Preserve source versions and distinguish observations from the team’s interpretation.

A learning loop, not a victory slide

Choose a revision that improves the next explanation. Do not claim that the campaign worked simply because the planned assets were produced.
