01 / CASE STORY

Name the story’s status first.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

A clearer handover begins with a question. In this fictional workshop story, a maker wants the next person to understand why a production note matters.

Use the narrative to explore a communication problem, not to imply a customer endorsement. The characters and sequence are authored examples, and no interview or publication permission has been obtained.

Permission before promotion

An actual case study needs a defined scope, participant agreement and review process. Illustration does not provide likeness or testimonial rights.

STORY SOURCE

setting / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Story status

Authored fictional scenario; no actual customer.

Permission status

Not obtained; no real participant approached.

Publication boundary

Do not present the narrative as a testimonial.

Would a reader mistake this story for a real customer account?

02 / CASE STORY

Set a scene without a success claim.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

A small ceramics workshop prepares materials for the next shift. A note lists the objects to finish, but does not explain why one batch needs special attention.

The scene establishes a task and a missing piece of context. It does not establish the frequency of this problem, the size of the workshop or the financial cost of a misunderstanding.

Background worth keeping

Describe only the details needed to understand the decision. In a real case, check the setting and operational details with the relevant participant.

STORY SOURCE

challenge / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Setting

Fictional ceramics workshop between shifts.

Task

Explain a batch-specific decision to the next maker.

Missing context

Why this batch needs a different review.

Which contextual detail explains the task rather than decorating it?

03 / CASE STORY

Make the challenge observable.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

The next maker can read what to do but cannot see the reasoning behind the instruction. The challenge is continuity of understanding, not a proven productivity loss.

A real story would need evidence of the original practice and its limitations. Avoid manufacturing a dramatic before-state simply to make the proposed change appear effective.

A narrow challenge statement

The note separates instruction from explanation. That is the fictional tension; claims about delays, mistakes or savings are not supplied.

STORY SOURCE

action / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Before-state

Instruction exists without its original rationale.

Consequence question

Can the next maker interpret the exception?

Evidence gap

No observation or error record supplied.

What observation would support the challenge in an actual workshop?

04 / CASE STORY

Explain the choice and alternatives.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

The maker chooses to add a short context card beside the batch note. Another option would be a conversation or a clearer annotation on the original sheet.

The choice is modest and reversible. It is not a claim that one product outperforms all alternatives. A credible case acknowledges what was considered and why the selected approach fit the immediate task.

Decision rationale

Keep the rationale separate from an outcome. A plausible reason for trying something does not prove that the trial worked.

STORY SOURCE

outcome / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Chosen approach

Add a short explanation beside the instruction.

Alternative

Clarify the existing sheet or speak directly.

Selection reason

Keep the rationale available at the handover.

Could a simpler alternative address the same need?

05 / CASE STORY

Show the action in sequence.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

The maker writes the batch reference, the reason for the exception and the question the next shift should check before continuing.

A second person reads the card and identifies what remains unclear. This is the authored action sequence, not an observed adoption process or a record of staff training.

Action with a review point

The card does not replace specialist judgement or operational safety instructions. In an actual setting, confirm how the note fits authorised procedures.

STORY SOURCE

quotation / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Step one

Link the instruction to the relevant batch.

Step two

Explain the reason for the exception.

Step three

Leave an explicit question for the next reviewer.

Where would the receiving person ask for clarification?

06 / CASE STORY

Describe change without making up a result.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

The proposed after-state is a handover note that carries both instruction and rationale. Whether that changes understanding or work quality remains an open question.

No before-and-after measurement, time saving or customer quotation exists in this example. A real outcome section should identify its source, timeframe and uncertainty instead of substituting a persuasive number.

Outcome evidence is absent

Use the phrase proposed after-state until an appropriate observation exists. The narrative structure is complete even when a real-world result is unknown.

STORY SOURCE

setting / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Proposed change	Measured result	Quote status
Instruction and rationale appear together.	Not supplied; no before-and-after comparison.	No participant quotation or endorsement supplied.

What source would support a change in understanding?

07 / CASE STORY

Keep a source trail for every assertion.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

A publishable case lets a reviewer distinguish direct observation, participant interpretation and the writer’s summary. This fictional story contains only authored narrative.

The five-item source register marks setting, challenge, action, outcome and quotation boundaries. It is not an interview transcript or a record of participant approval.

Source classes, not invented citations

For a real case, retain reviewable notes and the permitted scope of use. Do not treat a polished sentence as evidence merely because it sounds specific.

STORY SOURCE

challenge / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Observation	Interpretation	Approval
None supplied for this authored scenario.	Writer’s illustrative explanation, not participant testimony.	No actual source or participant review completed.

Can each assertion be traced to an appropriate source?

08 / CASE STORY

Give limitations space in the story.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

A context card may help only when the next person can find it, interpret it and act within the relevant procedure. The card itself guarantees none of those conditions.

The example does not generalise to other workshops or tasks. An actual case should describe dependencies and alternative explanations rather than turning one account into a universal benefit.

Limits that affect interpretation

Permission, accessibility, workflow fit and operational responsibility need separate checks. A narrative cannot settle them by implication.

STORY SOURCE

action / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Dependency

The receiving person can find and interpret the note.

Alternative explanation

A clearer original instruction may be sufficient.

Generalisation

No broader effectiveness claim established.

Which condition could make the proposed approach unsuitable?

09 / CASE STORY

Extract a useful lesson, not an endorsement.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

The lesson is to keep an instruction close to its reason and to leave room for the next person’s question. That is an editorial principle, not a customer result.

If adapting a real case, distinguish a paraphrase from a quotation and agree the permitted attribution. Do not place invented words inside quotation marks or attach them to a real person.

A reusable editorial takeaway

Try this review question: what would the next person need to understand before using this note? It invites inquiry without claiming a guaranteed outcome.

STORY SOURCE

outcome / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Lesson

Keep the reason near the instruction.

Attribution

No actual speaker or participant endorsement.

Reuse boundary

Check quotation and attribution permissions separately.

Does the takeaway remain honest without the story’s fictional setting?

10 / CASE STORY

Close with a relevant conversation.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

If your handovers lose context, start by examining one note with the people who use it. Ask what information is missing before choosing a new tool.

This is an invitation to consider a task, not an offer of a functioning service. A real contact destination should explain what the reader can expect and how any shared information will be used.

Next step with a clear boundary

Review the story status and permissions again before sharing. Retain the distinction between an illustrative case and evidence from an actual organisation.

STORY SOURCE

quotation / authored fiction

RIGHTS / OUTCOMES

No participant permission or measured change supplied.

SCENE / ACTION / SOURCE NOTE

Reader action

Review one handover note with its intended reader.

Contact status

No live contact service or response promise supplied.

Sharing check

Keep fictional status and source limits visible.

What is the smallest appropriate next conversation?
