01 / IMPACT THESIS

Hold two paths in view.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

Open Shelf Resources is our fictional concept for making shared reading material easier to adapt. We want to examine both an intended positive change and a sustainable commercial route. Neither path is an established outcome, and success on one would not automatically prove the other.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Introduce the two-track structure explicitly. No social-impact measurement, real beneficiary outcome, customer evidence or financial performance is supplied.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Intended change

Improve access to context-sensitive learning resources.

Commercial question

Who would adopt and sustainably pay for a defined offering?

Evidence boundary

Both paths contain hypotheses, not validated outcomes.

How would you distinguish an appealing mission from demonstrated impact?

02 / IMPACT THESIS

Define the problem without claiming representation.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

The premise is that a resource may need adaptation before it fits a particular discussion. We do not claim to speak for every reader or setting. The problem needs real contextual evidence and meaningful input before it can support a broader statement of need.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> All illustrated people are fictional adults. Do not infer disadvantage, vulnerability, consent or a particular community's priorities from an image.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Problem premise

A resource may be unavailable or unsuitable for its context.

Context to understand

Understand language, task, access and adaptation conditions.

Voice not represented

No community consultation or representative voice established.

Whose perspective would need to shape a genuine problem statement?

03 / IMPACT THESIS

Treat the audience as a research question.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

A relevant audience would be defined by its task and context, not by a convenient demographic story. We would need to understand who adapts material, why they do it and what constraints matter before selecting a service model.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> No participant research, recruitment or community endorsement has occurred in this example. The script should request context rather than invent a representative persona.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Audience task

Find and adapt a resource for a particular learning task.

Context gap

Actual setting, constraints and participant priorities unknown.

Appropriate inquiry

Use appropriate, consented inquiry rather than assumed demand.

What evidence would show that this audience definition is useful?

04 / IMPACT THESIS

Explain an intended change pathway.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

The intended pathway is to make a resource available, support a thoughtful adaptation and allow an appropriate use in context. Those are hypotheses connected by dependencies, not proof that the final outcome follows from producing an artifact.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> The source register records three impact hypotheses, each with an unverified evidence status. Output availability, meaningful use and positive outcomes must remain separate.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Proposed activity

Make a resource available with usable context.

Intended intermediate change

A person may judge whether adaptation is appropriate.

Dependency

Availability does not imply use, learning or wider impact.

Which link in the pathway is most likely to fail?

05 / IMPACT THESIS

Say what evidence would mean.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

A count of materials distributed would describe an output, not establish that anyone benefited. A meaningful evaluation would need a defined question, appropriate methods and attention to unintended effects. We are not reporting measured impact or attributing a real change to this concept.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Avoid inventing testimonials or success rates. A proposed outcome indicator is not a measured result, and a correlation would not automatically establish attribution.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Output measure

Count resources supplied only as an output.

Outcome question

Ask whether appropriate use changes a meaningful experience.

Attribution boundary

No measured impact or causal attribution supplied.

What would you need to know beyond the number of resources produced?

06 / IMPACT THESIS

Make the commercial pathway explicit.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

The commercial questions concern the offering, the adopting organisation and sustainable payment conditions. We have not established a buyer, price or recurring revenue. A mission statement does not replace evidence that a real customer values a particular service.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Three separate commercial hypotheses appear in the source register. None is marked validated, and the register contains no market size, transaction or revenue forecast.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Offering hypothesis

A defined resource-and-support offering remains hypothetical.

Buyer hypothesis

An adopting organisation is a question, not a customer.

Payment conditions

Price, willingness to pay and sustainable delivery are unknown.

What distinct evidence would support the commercial path?

07 / IMPACT THESIS

Name the trade-offs.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

A commercially attractive format might not fit every context, while a highly tailored resource might create a maintenance burden. We want those tensions visible rather than claiming that mission and revenue automatically reinforce each other.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Treat trade-offs as questions for responsible review. No real participants, contracts, safeguards or operating arrangements are supplied by this template.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Potential tension

Access objectives may conflict with payment conditions.

Affected interest

People using resources and organisations funding provision.

Review question

Who bears the burden if the payment model limits access?

Which trade-off could require changing the proposed model?

08 / IMPACT THESIS

Separate governance from aspiration.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

A credible account should explain who would review claims, who would hear concerns and how a direction could be revised. Naming a mechanism is not proof that a governance system exists or works. Those responsibilities would need real confirmation.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Do not claim certification, ethical approval or impact credentials. The template supplies role questions, not appointments or an assurance assessment.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Claim review role

Assign responsibility for checking any outcome statement.

Concern route

Provide a route for concerns and correction.

Responsibility to confirm

No governance body, authority or appointments established.

Who could challenge an overstated impact claim?

09 / IMPACT THESIS

Connect resources to both kinds of uncertainty.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

A resource discussion should not fund a mission story while ignoring commercial uncertainty, or the reverse. We would connect proposed work to a question on each path and the conditions for continuing. No actual raise amount, valuation or investment terms are supplied.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> The six-row hypothesis register is not a budget or a forecast. Appropriate entity, financial and legal context would be needed for a genuine financing request.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Impact question

What evidence would support appropriate use in context?

Commercial question

What evidence would support a sustainable offering?

Commitment boundary

No funding amount, commercial commitment or promised result.

What evidence on each path should precede a larger commitment?

10 / IMPACT THESIS

Invite a balanced next conversation.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

ILLUSTRATIVE SPOKEN DRAFT

We invite a conversation that keeps intended change, unintended effects and commercial conditions visible together. The next step is to decide which real questions matter most and what suitable evidence would address them. An attractive mission is a reason to ask carefully, not permission to skip verification.

SPEAKER / EVIDENCE NOTE — NOT A PERFORMANCE CLAIM

> Close without promises of social return, financial return or a funding commitment. Preserve the fictional source labels and the distinction between intention and outcome.

Keep the fictional status visible. Replace illustrative material only with appropriately sourced, verified information; proposed questions are not completed diligence.

Next impact inquiry

Explore context and appropriate-use questions with affected people.

Next commercial inquiry

Explore adoption and payment questions separately.

Decision sought

Choose a next inquiry, not a presumed impact investment.

What would you need to learn before supporting further exploration?
