01 / DEMO DAY

Make the showcase’s purpose inspectable.

DEMO FEEDBACK CELL

D01 / clarity

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Purpose	Units	Output
Inspect a concept and its unresolved conditions.	3 authored concepts, not functioning-product claims.	A question and an appropriate next-artifact request.

What should a viewer be able to question rather than merely applaud?

This fictional demo day lets an audience examine a concept, ask a question and identify the next artifact that would clarify it. It is not a competition to prove readiness or a public endorsement.

Three authored units provide examples: Context Card, Folded Route and Revision Window. None is an operating product, booked presentation or verified capability. A polished illustration should not stand in for evidence of what a concept can do.

Showcase purpose

Keep the demonstration status visible and distinguish a question from a commitment. No real event, presenter appointment or audience is established.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

02 / DEMO DAY

Use the unit directory as a discussion index.

DEMO FEEDBACK CELL

D01 / open-question

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

D01 Context Card: passage and purpose together.	**D02** Folded Route: an optional guide with a visible boundary.	**D03** Revision Window: an explanation and its reason for change.

Which unit raises the most useful question for the audience?

D01 Context Card explores keeping a passage beside its question. D02 Folded Route explores an optional paper guide. D03 Revision Window explores showing why an explanation changed.

The directory organises the fictional guide, not a schedule or a ranking. There are no confirmed presenters, venues, start times or commitments to build. Select a unit according to the question worth examining.

Unit directory

The source register has one cell per unit for clarity, open question and next artifact: nine uncollected cells in total, not nine audience responses.

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

03 / DEMO DAY

Write a brief that does not outrun the artifact.

DEMO FEEDBACK CELL

D01 / next-artifact

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Task	Proposed artifact	Not shown
Inspect why a passage was saved.	A card carrying passage, question and source status.	No working system, user result or customer evidence.

Which sentence could make a viewer think an unverified capability is already working?

A unit brief should state the task, what the proposed artifact makes visible and what has not been demonstrated. Keep those distinctions in the introduction rather than hiding them in a closing disclaimer.

For Context Card, the task is to inspect the reason for saving a passage. The proposed artifact is a card linking passage and question. No usability result, customer adoption or automated verification is established.

Demonstration brief

A credible brief can say that a prototype is absent or incomplete. The directory is not evidence that a concept has been implemented.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

04 / DEMO DAY

Tell the unit story in three moves.

DEMO FEEDBACK CELL

D02 / clarity

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Task	Artifact	Question
Name the problem the concept is intended to address.	Show or describe only what is actually available.	Ask what evidence or clarification should come next.

Does each move preserve the same capability boundary?

Start with the task, show the proposed interaction and close with the unresolved question. The audience should be able to distinguish an intended use from something the artifact has actually demonstrated.

For an unbuilt concept, describe rather than simulate a successful user outcome. Do not invent a testimonial, a release date or a performance number to make the story feel complete.

Task / artifact / question

A useful closing question is: what would you need to inspect before believing this interaction helps the task? It invites scrutiny rather than a purchase or investment commitment.

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

05 / DEMO DAY

D01 example: a card with an unresolved source.

DEMO FEEDBACK CELL

D02 / open-question

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Visible concept	Unresolved condition	Next artifact
Passage, working question and source status together.	The relationship and source still need review.	An appropriately bounded concept prototype, if developed.

What does the example reveal, and what still needs to be established?

The imagined Context Card contains a passage, the question that prompted it and a source-status note. Its usefulness would depend on whether another reader can understand the relationship.

This is an authored example, not a working software feature or a reported user test. A missing source remains missing even when the card’s layout is attractive. Demonstration should make that gap inspectable rather than erase it.

Example unit / not a product claim

A relevant next artifact could be a bounded, inspectable prototype with clear limitations. No prototype, evaluation or participant response is supplied by this template.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

06 / DEMO DAY

Ask questions that distinguish clarification from endorsement.

DEMO FEEDBACK CELL

D02 / next-artifact

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Clarify	Challenge	Bound
What task and artifact are being proposed?	Which condition could make this approach unsuitable?	No actual audience question or endorsement supplied.

What information is missing that a viewer needs before forming a judgement?

A viewer might ask what the concept is intended to do, what is actually available and which assumption could make it unsuitable. A question is not permission to quote the viewer as a supporter.

The host should keep capability, interpretation and actual evidence distinct. No audience member, question, feedback event or endorsement is represented in the source register.

Audience-question prompts

For Folded Route, ask whether the guide explains an optional sequence without implying real venue access or safe wayfinding. The concept has no actual location data.

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

07 / DEMO DAY

Use a feedback card without a score.

DEMO FEEDBACK CELL

D03 / clarity

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Clarity	Open question	Next artifact
What was understandable about the task and artifact?	What assumption or capability remains unresolved?	What would help a suitable reviewer inspect the concept?

Can the presenter act on the question without treating it as a promised result?

The card has three fields: what was understandable, what remains open and what next artifact would help. Keep the feedback tied to the presented concept and its stated limits.

The nine unit-by-field cells in the source register are uncollected. They contain no votes, ratings or participant statements. Agree any real recording, naming and reuse arrangement before collecting feedback.

Clarity / open question / next artifact

For Revision Window, a useful question is how the reason for a change could be inspected beside the earlier wording. That is an authored prompt, not received feedback.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

08 / DEMO DAY

Let discussion return to the relevant unit.

DEMO FEEDBACK CELL

D03 / open-question

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Clarification round	Challenge round	Return loop
Check the audience's understanding of the proposal.	Inspect an assumption or limitation.	Link the next question back to the unit and available artifact.

Which question belongs with this unit rather than with a general showcase claim?

A discussion round can move from clarification to challenge and then to a next-artifact question. Return to the unit brief if the conversation begins to assume capabilities not actually shown.

This is a proposed discussion structure, not a timed schedule or a record of actual participation. Avoid turning the conversation into a popularity ranking or assuming that silence means approval.

Feedback loop

A presenter may identify an unanswered question without promising a reply or a product change. Record any real commitment only when appropriately agreed.

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

09 / DEMO DAY

Keep follow-up contact separate from event participation.

DEMO FEEDBACK CELL

D03 / next-artifact

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Purpose	Permission	Record
A clearly defined, appropriately agreed follow-up.	No actual opt-in or contact authority established here.	Retain only information appropriate to the actual purpose.

What exactly has the person agreed to receive or share?

Someone may want to see a later artifact or continue a concept conversation. That interest should not automatically create a mailing-list entry, a public supporter label or permission for unrelated contact.

No contact details, opt-in, data-retention arrangement or response service is supplied. A real organiser must establish an appropriate purpose and permission before collecting or sharing personal information.

Follow-up boundary

A useful note can record a question without a person’s identity when that is sufficient. Do not promise availability or a reply time that has not been arranged.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

10 / DEMO DAY

Review what became clearer, not how impressive it looked.

DEMO FEEDBACK CELL

D01 / clarity

SHOWCASE BOUNDARY

3 authored units × 3 fields; no real demo, feedback or endorsement.

UNIT / QUESTION / NEXT ARTIFACT

Brief revision	Evidence question	Outcome boundary
Make one task or limitation easier to understand.	Identify the unverified assumption that matters most.	No real audience, endorsement or business result supplied.

What should change before the next appropriate demonstration?

After a real showcase, compare the unit’s stated question with the appropriately recorded feedback. Ask which capability remained unclear and what artifact could address that uncertainty.

This example reports no actual presentations, audience reactions, leads, adoption or investment interest. Its review is a method rather than a success report. Preserve the original brief when changing the concept story.

Showcase reflection

Carry forward a clarification to the brief, an unresolved assumption and a bounded next-artifact question. A successful-looking event image does not validate the concepts.

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json
