01 / WORKSHOP RUNBOOK

Give the workshop a visible artifact.

PLANNED BLOCK

opening / 5 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Artifact

A supplied passage, a working question and a context card.

Task stations

S01 inspect the connection; S02 assemble the card.

Boundary

No actual event, assessment or certified outcome.

What can a participant inspect at the end without pretending it proves a skill?

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Make a Context Card is a fictional workshop in which a participant links a supplied passage to a question and then builds a short card that makes the connection inspectable.

The event output is a draft artifact and a review question, not a score, certificate or promise of improved performance. Two task stations support the activity; no actual booking, venue or attendee group is established.

Workshop objective

Use invented material unless a real organiser has an appropriate basis for using another source. Participation in the activity should not require sharing private work.

02 / WORKSHOP RUNBOOK

Prepare the station inputs and response choices.

PLANNED BLOCK

station-one / 12 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Source material

An invented passage with its fictional status visible.

Making materials

A suitable way to write, arrange or describe a card.

Real-setting check

Venue, access arrangements and responsibilities need verification.

Which missing input would prevent the task from being understandable?

Figure 1 / fictional illustration, not evidence / curated image source in provenance.json

Prepare a short invented passage, question cards and a way to draft or describe a context card. Check what each station needs to receive before considering the activity ready.

No actual materials, access support or venue arrangement is supplied. Real organisers must verify the relevant conditions and responsibilities. Do not treat this preparation list as an operational safety assessment or a guarantee that one format suits everyone.

Preparation check

Offer an appropriate alternative response mode where feasible, and make public sharing optional. Do not ask participants to supply confidential material to compensate for missing preparation.

03 / WORKSHOP RUNBOOK

Assign functional roles without inventing appointments.

PLANNED BLOCK

transfer / 3 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Host

Explain the event purpose and actual participation arrangements.

Station guide

Clarify the bounded task and its inputs.

Recorder

Keep only appropriate, agreed activity notes.

Who would clarify a task question without taking over the participant's work?

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

The host explains the shared purpose. A station guide clarifies the task at an actual station. A recorder retains only appropriately agreed notes about the activity.

These are proposed functions, not named people or delegated responsibilities. Participants may work privately, and a recorder should not infer capability or motivation from a draft card. Real organisers must establish the actual roles needed for their setting.

Role handoffs

Before moving between tasks, identify what artifact travels and what question should remain visible. A person's title should not substitute for an agreed responsibility.

04 / WORKSHOP RUNBOOK

Open with the task and its limits.

PLANNED BLOCK

station-two / 15 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Say

Make the reason for a saved passage visible.

Explain

Two stations, one draft card and an optional share.

Check

Which part of the instruction needs clarification?

Can a participant explain what the stations ask them to do?

Figure 2 / fictional illustration, not evidence / curated image source in provenance.json

Say: we will connect a passage with a question and make a small card for someone else to inspect. You can use the invented sample and choose whether to share your draft.

Explain the two stations and the review question before beginning. The proposed opening block is five minutes. The run sheet is a planning aid, not a tested duration or instruction to rush a participant.

Opening / 5 planned minutes

Check whether the task is understandable. If it is not, clarify the instruction rather than assuming that a participant needs to try harder.

05 / WORKSHOP RUNBOOK

Station S01: inspect the passage-question link.

PLANNED BLOCK

sharing / 15 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Input

An invented passage and a possible working question.

Output

One tentative connection with an unresolved condition.

Transfer

3 illustrative minutes; not physical wayfinding or a safety route.

Which part of the passage supports the proposed connection?

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

At the first station, read the supplied passage and choose a working question. Write or describe why the passage might matter to that question, leaving an uncertainty visible.

The proposed task block is twelve minutes, followed by a three-minute transfer in the illustrative run sheet. A participant can ask for clarification or pause. No actual movement route, room capacity or suitable pace is established here.

First task / 12 planned minutes

Expected output: a passage reference, a question and one tentative connection. Carry that artifact to the next task under the actual organiser’s arrangements.

06 / WORKSHOP RUNBOOK

Station S02: assemble a card another reader can inspect.

PLANNED BLOCK

closing / 10 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Input

The tentative connection from S01.

Output

A draft card with passage, question and source status.

Review point

What remains unclear to another suitable reader?

What would a reader still need to check before reusing this passage?

Figure 3 / fictional illustration, not evidence / curated image source in provenance.json

Use the first station’s note to make a card with the passage reference, working question and reason for the connection. Keep the source status near the statement it qualifies.

The proposed second task block is fifteen minutes. A clearer-looking card is not necessarily a better supported interpretation. Ask what another reader can understand from the artifact alone, without explaining every choice verbally.

Second task / 15 planned minutes

This station takes the first note as its input and returns a draft card plus a review question. No working product or actual service is implied by the exercise.

07 / WORKSHOP RUNBOOK

Share the artifact without making sharing compulsory.

PLANNED BLOCK

opening / 5 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Notice

Name a visible relationship in the artifact.

Ask

Which source or condition still needs context?

Choice

A participant may decline public sharing or use the invented example.

Which question helps inspect the card without judging its maker?

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Invite participants to show a card or discuss an invented example instead. Ask what the card makes visible and what information a reader would still need.

The sharing block is proposed as fifteen minutes. Do not turn a public share into an undisclosed assessment or infer that a quiet participant did not engage. Recording, naming and later reuse need separate appropriate arrangements.

Sharing / 15 planned minutes

Feedback can describe one visible feature and ask one clarifying question. The participant decides how to use it within the task.

08 / WORKSHOP RUNBOOK

Close by preserving the open question.

PLANNED BLOCK

station-one / 12 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Takeaway

A question can travel with a passage and its source status.

Time model

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes.

Evidence boundary

No attendance, learning gain or completed event reported.

What should remain visible after the workshop ends?

Figure 4 / fictional illustration, not evidence / curated image source in provenance.json

Ask participants to keep one question beside the card: what should be checked before this passage is reused? Summarise that a visible connection is not the same as a verified claim.

The proposed closing block is ten minutes. The full illustrative run sheet totals sixty: opening 5, S01 12, transfer 3, S02 15, sharing 15 and closing 10. None is an actual elapsed-time record.

Closing / 10 planned minutes

Explain any actual record-handling arrangement rather than promising a policy that has not been agreed. Participants may retain their own draft where appropriate.

09 / WORKSHOP RUNBOOK

Discuss a disruption within the actual remit.

PLANNED BLOCK

transfer / 3 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Exception example

The supplied passage is unavailable.

Affected task

S01 lacks its agreed input.

Decision boundary

Actual organiser responsibilities and suitable alternatives must be checked.

Which condition needs clarification before the affected task continues?

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

If a sample or making material is unavailable, pause the relevant task and clarify what can reasonably be offered. Do not silently replace the agreed activity with a request for private participant material.

This page is a discussion aid, not an emergency procedure. Any real concern about the venue, access or people requires the actual organiser’s appropriate arrangements and responsibilities, which the template does not supply.

Exception / affected task / decision needed

A change to the input may change the learning task. Make that change explicit, and distinguish a proposed adaptation from an available option.

10 / WORKSHOP RUNBOOK

Review the station interfaces.

PLANNED BLOCK

station-two / 15 minutes

RUN-SHEET MODEL

5 + 12 + 3 + 15 + 15 + 10 = 60 planned minutes, not elapsed time.

STATION / INPUT / OUTPUT

Interface check

Did the first artifact support the second task?

Instruction check

Which cue needed clarification?

Revision boundary

No actual delivery result or tested schedule supplied.

What would make the next task handoff clearer?

Figure 5 / fictional illustration, not evidence / curated image source in provenance.json

After an actual workshop, examine whether S01 produced the input S02 needed and whether the review question stayed visible through sharing. Describe what occurred rather than invent a smooth run.

This runbook supplies no actual observations, timing, attendance or satisfaction data. A completed card is not evidence of lasting learning. Keep feedback about the activity distinct from a judgement about an individual participant.

Event review

Choose one instruction to revise, one station input to improve and one real-setting arrangement to verify before another event. Retain the earlier run sheet when changing the plan.
